

Public Governance, Performance and Accountability Amendment (Vaccine Indemnity) Bill 2023

Submission 22/8/2023

Alan Currie

Dear Committee

I would like to voice my concern regarding the Vaccine Indemnity that the Australian Government gave to the Pharma companies for Covid 19 Vaccines.

I am not in favour of these indemnities for the following reasons.

1. There is a long history of Australian and International law that has been established to protect consumers from defective products and services.
2. The basic principle of Duty of Care is applied in law when a company or individual has harmed an individual
3. Every industry I can think of is subject to safety regulations and law that protects the community from companies that sell defective or harmful products and services.
4. The only industry in the world that has been given product indemnity for some reason is Pharmaceutical Industry
5. Pharmaceutical companies like Pfizer, Moderna and others have been found guilty of negligence and deception in various courts around the world and have been ordered to pay millions in fines – but that does not resurrect those who have died from their malfeasance.
6. Covid 19 vaccines were falsely promoted to protect the Australian population and those who took the vaccine were told they would not contract Covid or pass it on. These claims by Big Pharma and Government were false and it caused pain, loss of wages, loss of personal health and in even the loss of large number of Australians who died because of the Covid 19 vaccines.
7. If we are to believe the recent admission by Robert Kennedy to Tucker Carlson, the Covid virus was a bio weapon funded by the US military and the Big Pharma companies where part of the game of function research that funded the development of the virus and the accompanying Covid Vaccines.
8. Therefore, Pharmaceutical companies have been engaged in crimes against humanity and must not be given indemnity especially when no other industry has that right.
