

Dear Sir/Madam,

my comment about the NBN rollout:

I still am very disappointed that the NBN is the internet source of choice for Victoria. All the cables are in place - only needed to be replaced to guarantee a solid improvement for residents especially those in regional and rural areas. We are 'lucky' in our area (Mount Beauty) as a mixture of NBN, cable and satellite will be used.

Furthermore - as I am sensitive to EMF/EMR I have sadly noticed the impact of the NBN infrastructure on my health at times. With the roll-out all over the State people are now covered in additional exposure to radiation/frequencies. This should not have been a preferred option in a time where the health of our population (especially children) should be our priority.

Kind Regards

Gabriele Thomson
