

TO WHOM IT MAY CONCERN

Vaccine indemnity (a free pass for Big Pharma) is a bad idea. Many of the people I know and love have been hurt by these Covid jabs. These Covid jabs did not stop or limit transmission as Pfizer's CEO Albert Bourla's statements said. It could not be explained how Pfizer's product causes myocarditis and pericarditis.

It has been confirmed that Pfizer Australia imported reserved lots of their Covid jabs for their own employees. This does not go down well with the general public especially the people that have suffered harm from these 'rushed to market' mRNA injections.

It is also shameful that Pfizer and other manufacturers refused to make known the 'Indemnity Agreement' with the Australian Government for which the Government has allocated an 'unquantifiable' amount in the 2023-24 Federal Budget papers.

Pfizer told the Committee that that: 'Pfizer always abides by all of the laws and regulations in the markets within which it operates', a stunning statement in the light of the company's long history of criminal fines and alleged fraud.

Senator Babet's Bill needs to pass to protect all Australian citizens.
