Inquiry into the implications of removing refundable franking credits Submission 16

SUBMISSION

- 1. I am rather confused as to why franking credits exist as part of the Australain tax system
- 2. In my opinion franking credits (refundable or otherwise) are a market distortion.
- 3. The government is apparently keen to drop the Australian corporate tax rate to 25% BUT with the dividend imputation leakage my guess is that the Australian corporate tax rate is below 24% already.
- 4. The double taxation argument is spurious. People working in the CBD and travelling by car pay their personal taxes and then pay tolls are they double taxed?
- 5. People who pay their personal taxes also pay GST on their purchases are they double taxed?
- 6. Companies who pay myriad taxes payroll tax, state government fees and taxes pass these costs of doing business through increasing prices and/ or operating margins. Is this double taxation?

cheeeeeers
