

## **Standing Committee on Industry, Innovation, Science and Resources**

### ***The Now Frontier: Developing Australia's Space Industry***

#### **Corrigendum**

In the Committee's report *The Now Frontier: Developing Australia's Space Industry* presented on 2 December 2021, paragraph 4.51.

Paragraph 4.51 currently reads:

4.51 Mr Scott Schneider, Southern Launch, also noted that the purpose of the scheme is unclear:

..the purpose of cost recovery has not been made clear. It's to enhance the capabilities of the agency. It's to recover costs that are used in the assessment of the application, which could be staffing hours but also could be outsourcing those assessments to third parties—to contractors. That's the purpose of cost recovery under the current framework.<sup>84</sup>

Paragraph 4.51 amended to read:

4.51 Mr Scott Schneider, Southern Launch, also noted the purpose of the scheme:

..the purpose of cost recovery has been made clear. It is not to enhance the capabilities of the agency. It's to recover costs that are used in the assessment of the application, which could be staffing hours but also could be outsourcing those assessments to third parties—to contractors. That's the purpose of cost recovery under the current framework.<sup>84</sup>

Mr Pat Conaghan MP

Chair
