

Distribution of businesses by industry and Commonwealth electoral division, June 2004

Counts of businesses by postcode and industry, sourced from the Australian Bureau of Statistics Business Register, have recently become available for the first time. This has enabled estimates to be made of the number and distribution of businesses by industry and Commonwealth electoral division. These estimates are presented in a series of tables in this Research Brief.

List of Tables

- Table 1. Number of businesses by industry sector: top ten electorates, June 2004
- Table 2. Number of businesses by industry sector: all electorates, June 2004
- Table 3. Number of businesses by industry sector: electorates ranked by total number of businesses, June 2004
- Table 4. Industry concentration: top ten electorates, June 2004
- Table 5. Industry concentration: all electorates, June 2004

Executive summary

This Research Brief complements the Research Note ‘Estimates of Businesses by Commonwealth Electoral Division’¹ which contains estimates of the number of businesses by size of business and Commonwealth electoral division. Using data from the same source—the Australian Bureau of Statistics Business Register (ABSBR)² for June 2004—this Brief provides estimates of the number of businesses by industry and Commonwealth electoral division.

A number of tables are included that show, for each electorate, how many businesses there are of each industry type and the percentage contribution of each industry to the total number of businesses in the electorate (i.e. industry concentration).

Business numbers

There are just over three million businesses in Australia. The majority (almost 2.2 million) of these are non-employing businesses, leaving around 840 000 that are employing businesses.³

Almost a quarter of all businesses are to be found in property and business services (24 per cent), with the next largest number of businesses in construction (15 per cent) followed by finance and insurance (14 per cent). Together, these three industry sectors account for more than half of all businesses in Australia (but only a quarter of all employed persons which indicates that these sectors are mainly comprised of small businesses).

The largest number of businesses is to be found in the electorate of Sydney (84 100) with the nearby electorates of North Sydney (44 100), Wentworth (37 700), Bradfield (32 000), Warringah (30 200), Mackellar (27 900) and Lowe (26 000) also accounting for a significant number of businesses. These seven urban Sydney electorates together account for almost 10 per cent of all businesses in Australia.

After Sydney, the electorate with the next largest number of businesses is Melbourne (58 200) followed by Adelaide (45 400). Other non-Sydney electorates with a significant number of businesses include Melbourne Ports (42 000), Brisbane (37 400) and Curtin in Western Australia (36 100). At the other extreme, electorates with a very small number of businesses include Lingiari (NT), Franklin (Tas), Throsby (NSW), Braddon (Tas) and Lyons (Tas), all with fewer than 11 000 businesses each. (See Tables 1 to 3.)

Industry concentration

Industry concentration is a term that describes the percentage contribution of each industry to the total number of businesses in an electorate. It is a useful measure for comparing electorates in terms of the relative importance of different industries. For example, although Throsby (NSW) has far fewer retail businesses than Wentworth (NSW), retail is a more significant industry in Throsby. Retail accounts for 12.0 per cent of all businesses in Throsby compared with just 6.2 per cent in Wentworth. It is important to note, however, that

significance is measured here in terms of the number of businesses. Quite a different picture of significance might emerge if data were available on the percentage contribution of each industry to the total employment or gross product of an electorate.

Table 4 lists the 10 electorates which have the highest concentration of businesses in each type of industry. It shows that the electorate with the highest concentration of businesses in agriculture, forestry and fishing is Maranoa (Qld); mining—Kalgoorlie (WA); manufacturing—Oxley (Qld); construction—Brand (WA); wholesale trade—Moreton (Qld); retail trade—Braddon (Tas); accommodation, cafés and restaurants—Eden—Monaro (NSW); transport and storage—Calwell (Vic); communication services—Chifley (NSW); finance and insurance—Adelaide (SA); property and business services—North Sydney (NSW); education—Fraser (ACT); health and community services—Curtin (WA); cultural and recreational services—Wentworth (NSW); and personal and other services—Kingston (SA).

Note that although an electorate like Oxley has a higher concentration of businesses in manufacturing industry than any other electorate, this does not mean that Oxley has the largest number of manufacturing businesses (the electorate of Sydney has). Nor does it mean that within Oxley there are more manufacturing businesses than there are businesses of any other industry type (the largest number of businesses in Oxley are those in property and business services). It simply means that a higher proportion of businesses in Oxley are manufacturing businesses than is the case in any other electorate of Australia.

Table 5 gives a detailed breakdown of industry concentration by Commonwealth electorate.

Notes on tables

Tables 1 to 5 that follow have been derived from counts of businesses by industry and postcode supplied by the ABS. These counts at the postcode level were then aggregated by the Parliamentary Library to electoral divisions using a postcode to electorate concordance.⁴

For confidentiality reasons, the ABS had to suppress the value for the number of businesses in certain postcodes in certain industry sectors. Where this happened, it was necessary to impute a value for these postcodes to enable postcodes then to be aggregated to electorates. Since the ABS identified the total number of businesses in any given industry, values were imputed in such a way as to ensure that when the number of businesses in individual postcodes were added together, the sum still corresponded with these industry totals.⁵

Endnotes

1. Guy Woods, '[Estimates of businesses by Commonwealth Electoral Division \(ABS Business Register snapshot June 2004\)](#)', *Research Note*, no. 20, Parliamentary Library, Canberra, 2005–06.
2. The ABSBR is made up of two business populations, known as the Australian Bureau of Statistics maintained population (ABSMP) and the Australian Taxation Office maintained population (ATOMP). Businesses that belong to the ABSMP are typically large, complex and diverse businesses. Businesses that belong to the ATOMP are businesses with an Australian Business Number with at least one of the following non-cancelled tax roles: Goods and Services Tax Instalments Payer, Income Tax Instalment Payer or Income Tax Withholding. The vast majority of businesses are in the ATOMP. For more information see ABS, [Australian Bureau of Statistics Business Register: Counts of Businesses—Summary Tables](#), cat. no. 8161.0.55.001, pp 18–19, June 2004.
3. A business that belongs to the ABSMP (see [2] above) is defined as an employing business if it has greater than zero employees. A business that belongs to the ATOMP is defined as an employing business if it has a non-cancelled income tax withholding role and has remitted to the Australian Taxation Office at least once in the preceding five quarters. For more information see, *ibid.*, p. 21.
4. Andrew Kopras, '[Postcodes in electoral divisions \(2003 electoral boundaries\)](#)', *Research Paper*, no. 11, Parliamentary Library, Canberra, 2003–04.
5. Because of the method of imputing values for cells with suppressed values, the total number of businesses in each electorate identified in this paper may differ slightly from the corresponding figures published in the Research Note identified in [1] above.
