Rising Inequality? A stocktake of the evidence Parliamentary Library, 17 October 2018

Jonathan Coppel Commissioner

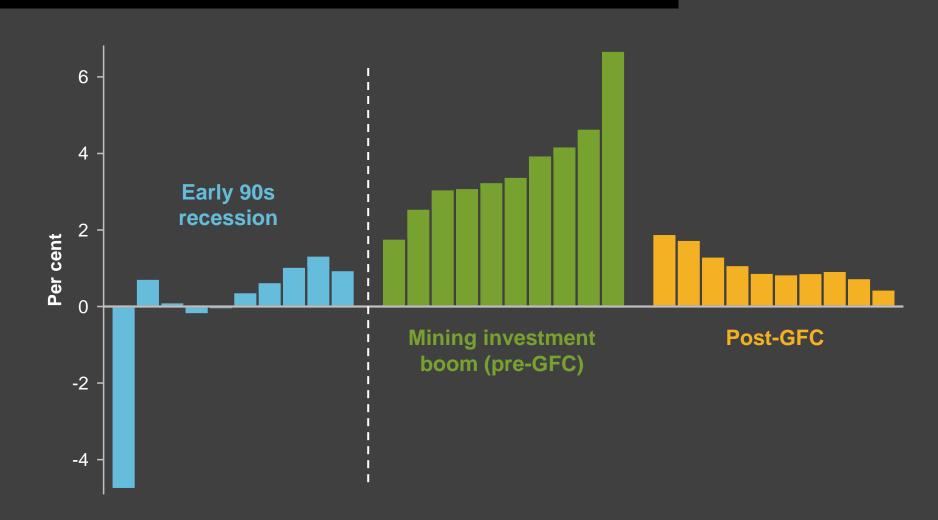

Australia's 27-year income growth: strong and broadly shared

Average annual growth rate in *real* equivalised disposable income by income decile, late 1980s to mid-2010s. Equivalised disposable income expressed in real US dollars using purchasing power parity exchange rates.

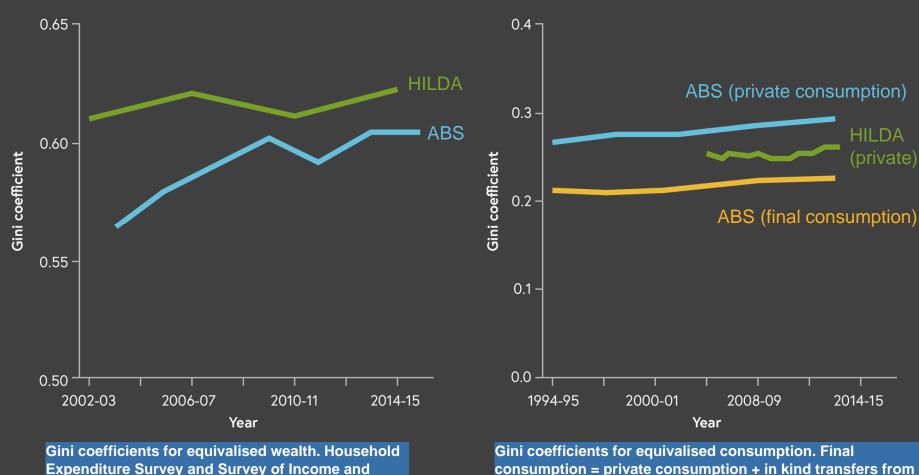

Growth can favour the top or bottom

Average annual growth rates in *real* equivalised disposable income by time period and income decile. Early 90s recession (1988-89 to 1993-94), mining investment boom (pre-GFC) (2003-04 to 2009-10), Post-GFC (2009-10 to 2015-16).

Wealth and consumption inequality have increased

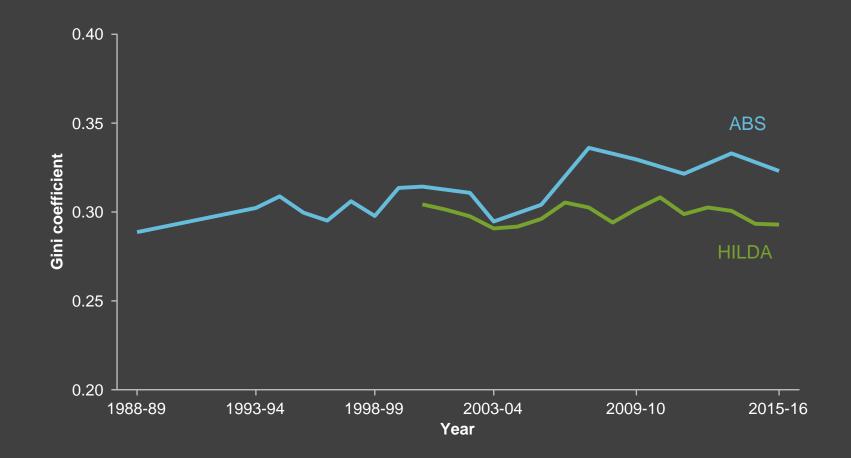

Housing; HILDA.

consumption = private consumption + in kind transfers from government (such as health and education).

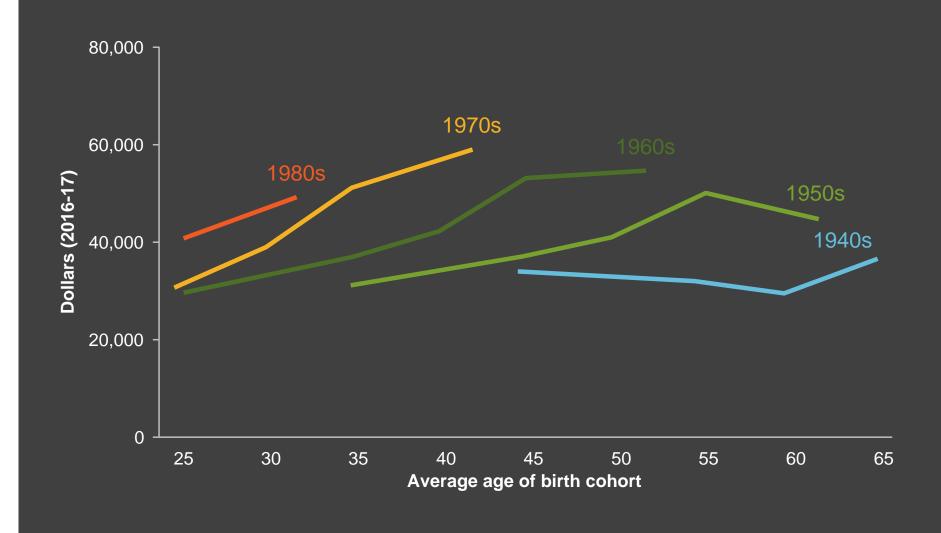

But the trend in income inequality is less clear

Gini coefficients for equivalised disposable income ABS = ABS Household Expenditure Survey and ABS Survey of Income and Housing HILDA = Melbourne Institute Household, Income and Labour Dynamics in Australia survey

Each generation has earned more than the last

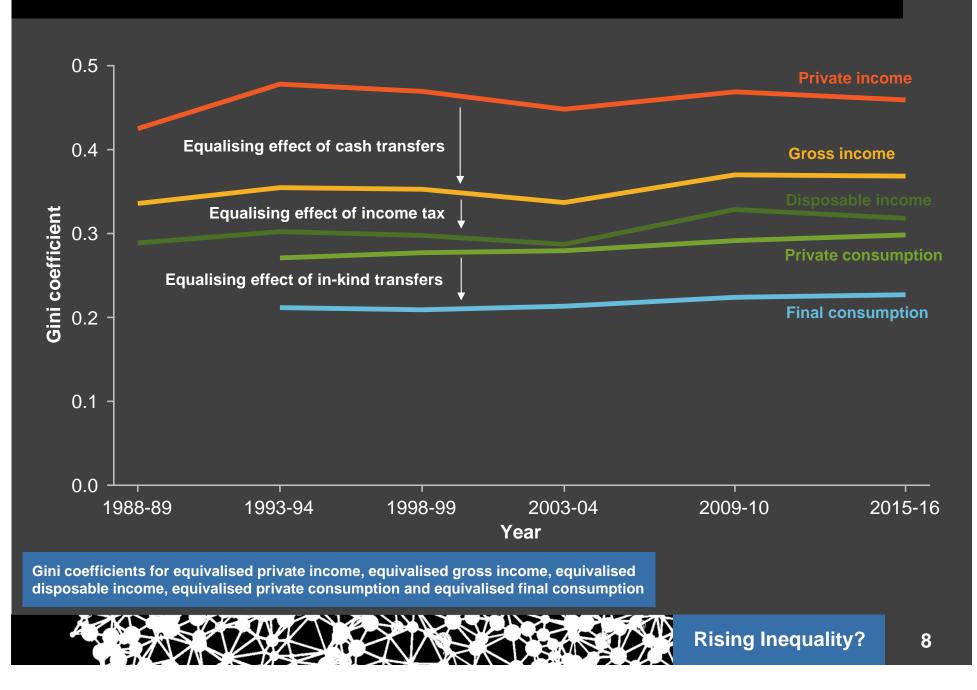

Average individual *real* disposable income by age and birth decade, 1988-89 to 2015-16

Income inequality in Australia is close to the OECD average

United States United Kingdom New Zealand Italy Low estimate High estimate Australia Canada Netherlands Germany Luxembourg Sweden Norway Finland Denmark 0.3 0.2 0.25 0.35 0.4 **Gini coefficient**

Income taxes and transfers drive inequality lower
