21st Century Schools

- The program is an outstanding opportunity to bring Primary school facilities into the 21st Century.
- The flexibility and responsiveness of the Federal government has been outstanding in ensuring what is built is what is needed as determined by the users of the facilities
- The program is of most value to schools that have buildings built over 100 years ago with plumbing, wiring etc of a long ago era.
- To date the building company has been flexible and considered in all that they have done
- The only issue to date has been costing - value for money ??
- We look forward to the 21st century facilities being available to us by the middle of next year.
