

I am writing in Support of the Renewable Energy Amendment Bill 2112

29th October 2012

Dear Sir Madam,

I support the proposal amendments to this Bill because I will be close to proposed wind development if it is built, and don't want to be getting sick in my own home and unable to sleep just like the people at Waubra who came and told me about their situation.

I have witnessed firsthand the effects that windfarms have had on other people. They cannot stand the noise emission so close to their homes. They can't sleep of a night. This sleep disturbance obviously leads to other adverse health effects as these gentlemen described. I am concerned of the adverse health effects which are created from excessive noise. I am extremely concerned about the lack of monitoring and regulating of infrasound.

I am concerned the wind industry act through ambiguity and deception. I support the Bill stating that all information should be made available via the internet
