SP Central Telepharmacy
Pharmacist
(Support Pharmacy)

ScriptPro provides software and hardware to allow pharmacies to conduct high-quality, safe and efficient telepharmacy operations. Inspection and verification, remote management, counseling, and patient education are the primary functions of telepharmacy. The pharmacist increases efficiency and provides pharmaceutical care for patients while maintaining accountability and control over all prescriptions dispensed at the remote pharmacy.

Inspection images appear on the pharmacist's screen and become part of the prescription record.

Remote Pharmacy

Technician

Patient

Inspection and Verification

The pharmacist oversees and supports personnel filling and verifying prescriptions at a remote location using a video/audio/data link over a network.

Images captured at the remote location allow the pharmacist to review, approve, and document all transactions.
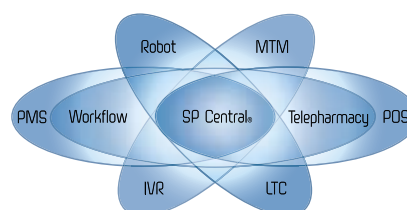

Counseling and Patient Education

The pharmacist communicates with the patient through a video and audio link to provide personalized, real-time counseling, education, and motivation.

Remote Management

The pharmacist supervises inventory replenishment and overall remote pharmacy operations.

One pharmacist can support multiple remote facilities from a central location, promoting efficient and cost-effective use of pharmacy staff.
