

I want to support Government Funding for Hyperbaric Treatment for wounds. I unfortunately developed an ulcer on the rear of my left lower leg prior in late 2011. This wound was not responding to medical treatment from my GP and it reached the size of a fifty cent piece when I was referred to The Hyperbaric Health Wound Centre in Berwick. After 29 treatments beginning in March my leg ulcer was completely healed and I was able to resume my normal life activities. I saw many pensioners and other people with various wounds and injuries much worse than mine finish their treatments with great success and little inconvenience to their lifestyles. They were all happily looking forward to continuing a healthy future. They all agreed that this would have been impossible without the Hyperbaric treatment they received. Thank you.
