

28.4.11

To Dr Timothy Kendall

Dear Sir!

My name is Wanda Allert and I  
live at [redacted] Waterloo, Ontario

The wind turbines are about 1.5 kms  
from my house.

There are 32 at 30m high of them.

Ever since they were turned on, I get  
headaches, I have a constant earache, at  
night when the turbines are running at full  
capacity I have turn the T.V up to drown  
out the jet engine like noise of the turb  
but we can't do anything about the vibr

It takes a long time to get to sleep,  
when I lay in bed my heart takes on the  
rhythm of the turbines, there for I get  
heart palpitations and not a lot of sleep.  
The turbines also have an effect on my  
equilibrium which makes me walk into  
door frames.

The turbines also effect my husband  
sleep pattern and stomachache

In the day time when I am outside in  
garden on a quite day to noise of the  
turbines become so annoying and  
the point where I have to go in

My husband and I just got back from a holiday, while away all our symptoms had gone it took just 2 days back home and the symptoms were back.

Originally we were all for the wind farm, but no one told us about the noise and the effect they would have on our daily live.

We are not against wind farms, as long as they are built minimum of 10km from town and or people.

No one from the wind farm has ever come to our house or has spoken to us.

I also wrote to our local Senate about 6 month ago, I have not had a reply, I also spoke to our local council, they told me not there problem and I am still waiting to hear from the EPA also about 6 month ago.

I have spoken to my GP about my symptoms but he has not as yet researched effect turbines.

I should mention that our house is a transom so the noise goes through the walls easier

regards

Wanda & Shane

Allott
