## Understanding the numbers in the spreadsheet

In Australia in 2015 there were 305,377 live births (ABS 3301.0 Births Australia 2015)

The Table shows a total of **500 newly diagnosed children** potentially commencing services each year in **300** per year with a significant polateral nearing loss, newly diagnosed papies through Australia's universal newborn hearing screening program – [around 1 baby per 1000 live births has a significant permanent hearing **1200** newly diagnosed infants and young children aged 1-5 years – [by age 5 years, for any given pinth cohort, the rate of diagnosed hearing loss will have increased from 1 per 1000 at birth to around 3 per 1000.

- ➤ 150 per year with unilateral (one-sided) hearing loss [based on the estimated rate of 0.5 per 1000 live births
- > Total 610- but doesn't include children with mild bilateral hearing loss
- ➤ Reduced to 500 new cases per year for modelling purposes as it is widely recognised that a significant number of families with children with low levels of hearing loss do not seek audiology, hearing aid and early

## Re public policy for language and social development in children who are deaf or hearing impaired

- 1. All babies/children with hearing loss are at significant risk of poor communication, education social
- 2. Development of language (speech or sign) is a critical factor in human cognitive development and social
- 3. Failure to develop fluent and expressive communication through speech or sign language is a very
- 4. Approximately 95% of children who are deaf or hearing impaired are born to hearing parents and the vast
- 5. There is now overwhelming international and national evidence that infants and children with all degrees of hearing loss are capable of development of fluent speech and language if they are identified and diagnosed very early and closely follow an evidenced-based clinical pathway including early fitting of hearing aids; early approach to the identification, diagnosis and management of hearing loss in infants and children. Through these arrangements a very significant number of hearing-impaired children develop fluent speech and language before school commencement with around 95% attending mainstream schools, 86% completing
- 7. The achievement of these results requires two things: (1) religious adherence to the evidence-based clinical pathway and, (2) adequate funding for the highly specialised, evidence-based programs that planning and funding mechanisms of the new scheme were at odds with these two fundamental requirements.

Ry party 2011 a long list of issues had been identified. These included:

- exclusion of some children from the scheme;
- significant delays in access and referral harmful to children's outcomes;
- significant delays in NDIS funding for children already on service;
- ➤ a high level of inconsistency in NDIS participants' funding packages;
- > chronic underfunding of participants in relation to the known cost of services and programs;
- > negative impacts of NDIS fee-for-service invoicing and payment arrangements that are inconsistent with standard practice for highly specialised multi-disciplinary early intervention programs in the health and medical
- > concerns about eligibility and funding for hearing-impaired children aged 6 years and over; and
- > uncertainty regarding jurisdictional responsibilities between disability, health and education.
- 9. All of these issues have been documented and debated at length with the NDIA since 2014 with little or
