Question No: 1

Hansard Ref: In Writing

Topic: FREE TV AUSTRALIA MODEL FOR RESOLVING COPYRIGHT DISPUTES

Senator McEwen asked:

Would the Department please review Free TV's evidence regarding its preferred model for resolving copyright disputes, and provide its response.

Answer:

The Broadcasting Legislation Amendment (Digital Television) Bill 2010 (the Bill) places obligations on a satellite service licensee to broadcast content supplied by remote, regional and metropolitan commercial television broadcasters, and on remote, regional and metropolitan broadcasters to supply content to a satellite service licensee.

Commercial negotiation is the most appropriate and efficient means of securing equitable remuneration for the supply of program content. The Department expects that broadcasters will come to commercial agreement regarding the supply of content to a satellite service licensee. However, in circumstances where a satellite service licensee and a terrestrial commercial television broadcaster cannot come to a commercial agreement for the supply of content, it is necessary to provide a mechanism to ensure equitable remuneration for both the broadcast rights and the underlying rights in works, cinematograph films and sound recording embedded in the broadcast. The Bill does this through the proposed statutory scheme.

The proposed statutory licensing scheme provides that if a satellite service licensee re-broadcasts material from a remote, regional or metropolitan broadcaster, copyright in the original broadcast will not be infringed if there is a commercial agreement between the satellite service licensee and the originating broadcaster, or if there is no agreement, where the Copyright Tribunal has determined the amount of equitable remuneration payable by the satellite service licensee to the original broadcaster.

In relation to the underlying rights to the program material broadcast, the proposed scheme provides that copyright in the works, cinematograph films and sound recordings embedded in a broadcast is not infringed where the satellite service licensee has come to an agreement with the declared collecting society, or if there is no agreement, where the Copyright Tribunal has determined the amount of equitable remuneration payable by the satellite service licensee.

In its submission to the Committee, Free TV has expressed several concerns regarding the statutory licensing scheme proposed in the Bill. Free TV argues that the statutory licensing scheme is overly complex; that it will not give appropriate remuneration to broadcasters for the value of the copyright in their broadcasts; and that it effectively characterises the satellite service as a re-transmission service. Free TV recommends that the Bill provide for referral of the issue to an independent third party who can determine fair value with reference to comparable affiliation deals and other relevant information.

**Senate Environment, Communications and the Arts Legislation Committee Inquiry into the
Broadcasting Legislation Amendment (Digital Television) Bill 2010**

Answers to Questions on Notice

Broadband, Communications and the Digital Economy Portfolio

The Department considers that the Copyright Tribunal, with its expertise and experience in determining the value of the use of copyright material, is the most appropriate independent body to adjudicate disputes between broadcasters where a commercial agreement cannot be reached. The Attorney-General's Department has also advised the Department that it is not aware of any precedent in Australian copyright regulation for appointing an independent arbitrator that is not the Copyright Tribunal.

When previously determining equitable remuneration for the use of copyright material, the Tribunal has, as set out in the Tribunal's decision on *Audio-Visual Copyright Society Ltd v Foxtel Management Pty Ltd (No 4)* [2006] ACopyT 2 (3 May 2006), taken into account:

- the 'market rate', that is, the rate actually being charged for the same licence in the same market in similar circumstances;
- 'comparable bargains', that is, bargains not in the same market but sufficiently similar to the notional bargain next mentioned to provide guidance to the Tribunal;
- 'notional bargain rate', that is, the rate on which the Tribunal considers the parties would agree in a hypothetical negotiation;
- the rate which the Tribunal determines as a result of what, for want of a better term, has been called 'judicial estimation'.

The same decision also sets out a number of factors which the Copyright Law Review Committee identifies as being taken into account by the Tribunal in making a 'judicial estimation', including:

- previous agreements between parties;
- negotiations between the parties preceding the application to the Tribunal;
- comparison of determinations under similar legislative regimes in other jurisdictions;
- comparison between royalties set by other licensors/collecting societies;
- the capacity of the licensee to pay;
- the value to the licensee of the use of the copyright material;
- the general public interest and the interests of consumers; and
- the administrative costs of a licensing body.

The scheme in the proposed Part VD of the *Copyright Act 1968* is framed specifically for the circumstances of the new satellite service and makes no reference to the re-transmission of broadcasts. Part VD explicitly characterises a satellite service as a re-broadcast service, not a re-transmission service, and the Department would expect the Copyright Tribunal to make its determinations in this context. Further, item 140 in the Bill excludes re-transmissions made by a satellite service from the operation of the re-transmission scheme in Part VC of the *Copyright Act 1968*.

In light of the above, the Department considers that the Copyright Tribunal is best placed to determine fair value for the use of copyright material with reference to comparable affiliation deals and other relevant information.

The Department also notes that parties are not obliged to use the Copyright Tribunal. They are free to nominate and appoint their own independent commercial arbiter if they wish to do so.

**Senate Environment, Communications and the Arts Legislation Committee Inquiry into the
Broadcasting Legislation Amendment (Digital Television) Bill 2010
Answers to Questions on Notice
Broadband, Communications and the Digital Economy Portfolio**

Also, if one of the parties does put a dispute to the Copyright Tribunal, the Copyright Tribunal can provide other options to a full-scale legal hearing and decision. The *Copyright Act 1968* already provides for alternative dispute resolution as part of the Copyright Tribunal's procedures.

Broadcasting Legislation Amendment (Digital Television) Bill 2010
Answers to Questions on Notice
Broadband, Communications and the Digital Economy Portfolio**

Question No: 2

Hansard Ref: In writing

Topic: FREE TV AUSTRALIA SUBMISSION: MATERIAL OF LOCAL SIGNIFICANCE

Senator Anne McEwen asked:

In its submission, Free TV expressed concern that item 38 of the Bill requiring broadcasters to provide material of local significance 'does not appear to capture the parameters of the proposed satellite news service' (Submission 7, p. 4). Would the Department please provide a response to Free TV's concerns.

Answer:

Free TV Australia has raised concerns that item 38 in the Broadcasting Legislation Amendment (Digital Television) Bill 2010 (the Bill) requires regional commercial broadcasters to supply a wider range of local material to the satellite service licensee other than the local news bulletins which the satellite news service is intended to provide.

Free TV Australia has suggested amendments to the Bill so that only 'long form' of local news produced and broadcast by regional commercial broadcasters should be required to be provided to satellite service licensees or multiple short form local news programs if the long form is not available. These would not include any other material of local significance, local content or local information that is not a news program that is produced and broadcast by regional commercial broadcasters.

The Government is consulting with broadcasters on this matter and is considering the amendments suggested by Free TV Australia.

Broadcasting Legislation Amendment (Digital Television) Bill 2010**

Answers to Questions on Notice

Broadband, Communications and the Digital Economy Portfolio

Question No: 2

Hansard Ref: ECA 61

Topic: STATUTORY LICENSING SCHEME - BACKDATING OF REMUNERATION NOTICES

Senator McEwen asked:

CHAIR—Before I go to other senators, also raised earlier today was the issue of backdating of remuneration notices. Were you paying attention when that evidence was given by, I think, Screenrights?

Dr Pelling—Was that in relation to the copyright provisions?

CHAIR—Yes.

Dr Pelling—I was not aware of the particular issue. I think we would have to take that on notice.

Answer:

Screenrights is concerned that the ability to backdate a remuneration notice under paragraph 135ZZZJ(3)(b) of the proposed amendments to the *Copyright Act 1968* creates the possibility of misuse by the satellite service licensee to leverage commercial negotiations.

The intention of the proposed Part VD of the Copyright Act is to address copyright issues that would arise where a satellite service licensee cannot come to a commercial agreement with a terrestrial commercial television broadcasting licensee for the supply of programs for broadcast on the satellite service. This is so that a satellite service licensee can meet its obligations under proposed Clauses 7B to 7D of Schedule 2 to the *Broadcasting Services Act 1992* to provide a service that offers an equivalent range of commercial digital television channels enjoyed in metropolitan markets as well as news and information sourced from the regional commercial television broadcasters operating in the relevant satellite licence area without the potential for copyright infringement

The provisions relating to re-broadcast by satellite service licensees deal with two types of copyright, copyright in the underlying works in the broadcast and copyright in the broadcast itself.

In relation to the copyright in the broadcast signal, the satellite service licensee may give a binding undertaking to the copyright owner in the absence of either a commercial agreement between the two parties, or a Copyright Tribunal determination of the amount payable (see subparagraph 135ZZZI(2)(d)(iii)). This undertaking is essentially an undertaking to pay the amount once it has been determined.

In relation to the copyright in the underlying works, remuneration to the rights holder is dealt with through a remuneration notice provided to a copyright collecting society. Proposed section 135ZZZJ of the Copyright Act deals with remuneration notices made under this arrangement. Where a remuneration notice is yet to be given to the collecting society by the satellite service

**Senate Environment, Communications and the Arts Legislation Committee Inquiry into the
Broadcasting Legislation Amendment (Digital Television) Bill 2010**

Answers to Questions on Notice

Broadband, Communications and the Digital Economy Portfolio

licensee, proposed paragraph 135ZZZJ(3)(b) allows a satellite service licensee to comply with its obligations to provide commercial television services without infringing copyright in a work, sound recording or cinematograph film included in a broadcast.

Once the satellite service licensee has given a remuneration notice to the collecting society, and an amount of equitable remuneration is subsequently determined, either by agreement between the satellite service licensee and the collecting society, or by the Copyright Tribunal (as provided under proposed section 135ZZZK), the satellite service licensee would be required to pay the agreed or determined amount of equitable remuneration in relation to the period that the remuneration notice is in force, including for the period before the remuneration notice was given. The satellite service licensee would be liable for copyright infringement for any period of use not included in the remuneration notice.

The backdating provision in paragraph 135ZZZJ(3)(b) is in the same form as subsection 135ZZL(3) in the statutory licensing scheme for the re-transmission of broadcasts under Part VC of the Copyright Act. The Department is unaware of any agreements made pursuant to subsection 135ZZL(3) of the Copyright Act that have caused detriment to the interests of copyright holders.

Under the Copyright Act, a party cannot be forced to agree to a negotiated agreement if that party would prefer to seek a determination of the Copyright Tribunal.

Broadcasting Legislation Amendment (Digital Television) Bill 2010**

Answers to Questions on Notice

Broadband, Communications and the Digital Economy Portfolio

Question No: [p 59 and p 69]

Hansard Ref: on Notice

Topic: Candidate list and Letters

Senator Fisher asked:

Senator FISHER—When were they (letters) sent?

AND

Senator FISHER—I presume it is a standard letter. Can the committee be provided with a copy of the minister's letter, please?

Answer:

Minister's letter to self-help licensees dated 30 March 2010

The Minister has written to each licensee of existing self-help facilities with the exception of some sites where the Special Broadcasting Service (SBS) is the only self help service (see below). The list of licensees and their addresses was provided by the Australian Communications and Media Authority (ACMA) from their licensee database. All letters were finalised by the 30 March 2010 and most were sent between the 30 March 2010 and 1 April 2010.

The letters were tailored to fit the circumstances of each of the licensees, and informed them whether any of their sites were on the candidate list of sites for conversion provided to the Government by broadcasters, and/or (as relevant) which of their sites were not on the candidate conversion list.

Categories of letters

A number of different categories of letters were produced which varied depending on the status of the self-help facilities operated by the licensee in relation to the candidate list, and the location of the sites (remote or non-remote licence areas of Australia). For a small number of licensees an individual letter was prepared.

The following categories of letters were created:

- a standard candidate letter for all licensees on the candidate list – Attachment A
- a standard non-candidate letter for all licensees not on the candidate list – Attachment B
- a standard mixed letter for licensees with at least one site on the candidate list and other sites operated by the licensee not on the candidate list – Attachment C
- a standard letter for licensees operating sites in a remote licence area – Attachment D

**Senate Environment, Communications and the Arts Legislation Committee Inquiry into the
Broadcasting Legislation Amendment (Digital Television) Bill 2010
Answers to Questions on Notice
Broadband, Communications and the Digital Economy Portfolio**

- five individual letters – Attachment E.

SBS-only sites

A total of 36 licensees are yet to receive a letter. These are licensees operating sites that only transmit SBS services on a self-help basis, with all other services from the site being provided by broadcasters themselves. Commercial broadcasters are not proposing to upgrade the SBS services at these sites to digital. The Government is currently considering options for SBS-only sites and will be writing to licensees of these sites when a decision has been made about them.

These licensees are:

Brewarrina Shire Council
Cook Shire Council
District Council of Coober Pedy
Flinders Ranges Council
Flinders Shire Council
Lightning Ridge Bowling Club
Paroo Shire Council
Rio Tinto Aluminium Limited
Robe River Iron Associates
Shire of Ashburton

Attn: Self-Help TV Manager

1 Market Square

BURRA SA 5417

Dear Sir/Madam

Broadcasters' offer to upgrade self-help television transmission sites from analog to digital

On 5 January 2010, I announced that under an agreement between the Government and commercial television broadcasters across Australia, broadcasters will upgrade a number of existing regional analog 'self-help' transmission facilities to operate in digital.

The Government has agreed to fund a satellite service to deliver digital television to all Australians living in blackspots where there is inadequate or no coverage provided by the broadcasters. As you may be aware, the Government introduced legislation into Parliament on 18 March 2010 to support the implementation of the satellite service. In addition, broadcasters agreed to upgrade a number of existing analog self-help sites to digital.

On 12 January 2010 I wrote to all local Councils to advise them of the Government's announcement and indicated that I would write further to operators of self-help facilities about their options in regard to moving to digital television.

I am now writing to inform you that the self-help facilities at Eudunda has been identified by broadcasters as a candidates for upgrading from analog to digital. The final decision as to whether or not these facilities will be upgraded will depend on agreement being reached with the current transmitter licence holder about the conditions under which the upgrade will be carried out.

It is important that you understand that this is an offer by the broadcasters. While the Government has strongly encouraged broadcasters to take every possible step to ensure that the site can be converted in a timely fashion, the final decision about whether and how to convert the sites is a matter for negotiation between the current licence holder and the broadcasters.

I am informed that a representative of the broadcasters will be contacting you in the near future to formally discuss their proposals and the terms of an agreement. For further information about the broadcasters' proposals, you should contact Alan Butorac at Regional Broadcasting Australia, on 0417 929 330 or by e-mail at alan@abden.com.au .

**Senate Environment, Communications and the Arts Legislation Committee Inquiry into the
Broadcasting Legislation Amendment (Digital Television) Bill 2010**

Answers to Questions on Notice

Broadband, Communications and the Digital Economy Portfolio

I also understand that the transmission facility at Burra retransmits SBS services only (the other services being provided by broadcasters). The Government is currently considering options for SBS-only retransmission sites and will be writing to licensees of these sites when a decision has been made about them.

Terms of the offer from commercial broadcasters

The free-to-air commercial broadcasters have informed me that they are prepared to offer a no-cost transmitter equipment upgrade to the self-help broadcasting facilities at Eudunda. This would cover replacement of the analog transmission equipment with digital transmission equipment at the existing self-help broadcasting site.

The digital equipment to be provided will transmit all digital services, including new digital multichannels, currently available in your licence area. Broadcasters will, as far as possible, ensure that the coverage of the digital transmitter is at least equal to the analog coverage currently provided by the existing analog facility. Broadcasters are also offering to provide maintenance of the upgraded equipment they install at their cost for an initial term of ten years. It is intended that the upgrade will take place at least six months before analog switch-off in your local area.

The offer being made by broadcasters is primarily related to the provision and maintenance of transmission equipment. Broadcasters have advised that the local community would be expected to continue to meet the costs of running the site, including:

- site-leasing costs,
- electricity,
- access charges, and
- other such costs associated with maintenance of the site infrastructure, such as air conditioning.

As part of this arrangement, continued access to the site for the broadcasters to provide equipment and maintenance would also need to be assured.

The local community will also be responsible for:

- keeping the site in appropriate physical condition,
- ensuring it continues to be suitable for a broadcasting facility, and
- undertaking any upgrades or improvements required to the transmission site infrastructure—such as the building, power, and antenna support infrastructure.

**Senate Environment, Communications and the Arts Legislation Committee Inquiry into the
Broadcasting Legislation Amendment (Digital Television) Bill 2010**

Answers to Questions on Notice

Broadband, Communications and the Digital Economy Portfolio

Broadcasters will:

- retain ownership of the equipment they provide,
- reserve the option to relocate the transmission site in future (for example, for the purpose of moving to a more suitable site), and
- hold the transmitter licence to broadcast the service.

Broadcasters have also advised that any digital transmission equipment upgrade will depend on satisfactory resolution of a range of technical matters, such as the availability of an adequate digital feed signal from the main transmitter in the licence area, and the availability of suitable radio-frequency spectrum.

An important consideration for you to be aware of is that the digital transmitters will use the same television channels as the analog service. This will mean that the analog service will be swapped directly to digital at a point in time (a so-called 'hot swap'), with no simulcast period. All residents in the area would therefore need to have converted to digital before the change-over. Broadcasters have said that there will be some outages to television services at the site while the new equipment is being installed, tested and commissioned, but they will try to keep these to a minimum.

Local broadcasters are working with the Digital Switchover Taskforce and the Australian Communications and Media Authority (ACMA) to address technical and licensing matters.

Broadcasters will be contacting licensees to discuss these matters further, and to clarify any outstanding issues, including the need to reach agreement about a suitable date for the upgrade. Broadcasters are also likely to seek co-operation from you to provide notices to residents informing them of developments in relation to the upgrade.

New satellite service for people unable to access terrestrial services

It would be open to you to decide not to accept the broadcasters' offer. In this case you would have two options.

First, households who are currently served by an analog self help facility not being upgraded, and who are otherwise unable to receive reception of the digital television services terrestrially transmitted in their area, will be eligible to receive digital television services from the new digital television satellite service which I also announced on 5 January 2010.

The new satellite service will feature channels carrying programs from the Seven, Nine and Ten networks and the main national broadcaster services ABC1 and SBS ONE, together with digital channels ABC2, ABC3, ABCHD, SBS TWO, ONE HD, GO! and 7TWO. A new ABC 24 hour news

**Senate Environment, Communications and the Arts Legislation Committee Inquiry into the
Broadcasting Legislation Amendment (Digital Television) Bill 2010
Answers to Questions on Notice
Broadband, Communications and the Digital Economy Portfolio**

channel is expected to replace the current ABCHD service later this year. The satellite service will be funded by the Government.

In addition to the news services offered by the national broadcasters, the satellite service will also provide viewers in regional Australia with access to the local news services currently broadcast by the commercial broadcasters in their relevant terrestrial licence areas. These services will be provided through a dedicated news channel.

To access the new satellite service, households will need to install satellite reception equipment, including a dish and a digital set-top box. The costs of installation will vary depending on the location, the size of the satellite receiving dish required and characteristics of the viewer's home.

The Government will provide a subsidy of \$400 to households in regional areas that are currently served by analog television self-help retransmission facilities who need to move to the satellite service because the self-help facility is not upgraded to digital. This subsidy will assist with the additional cost these households will incur in converting to satellite.

Alternatively, you may have reached a view that the local community would rather manage the conversion of the site to digital itself. If your community wishes to explore this option, you will need to talk to the Australian Communications and Media Authority (ACMA) about the availability of suitable television spectrum and other technical matters.

It is important to note that any communities electing to convert their self-help facilities themselves, rather than accessing the Government-funded satellite service, will need to do so at their own cost. You will also need to take account of the switchover date for your area (see below) as the site or sites would need to be converted in advance of switchover.

Household Assistance Scheme

The Government is implementing the Household Assistance Scheme to provide assistance to vulnerable Australians in the move to digital television. A household will be eligible for the Household Assistance Scheme where they own a TV, live within the area switching over, and where one or more residents are in receipt of the maximum rate of the:

- Age Pension
- Disability Support Pension
- Carer Payment

**Senate Environment, Communications and the Arts Legislation Committee Inquiry into the
Broadcasting Legislation Amendment (Digital Television) Bill 2010
Answers to Questions on Notice
Broadband, Communications and the Digital Economy Portfolio**

- Department of Veterans' Affairs (DVA) Service Pension or the DVA income-support supplement payment.

The scheme involves a government contractor visiting an eligible household to supply, install and demonstrate (at no cost to the householder) a high-definition set-top box—specifically chosen to ensure that it meets the needs of the elderly and people with a disability—and, where eligible, conduct any necessary antenna and cabling work, if required.

Eligible households served by self-help analog services will be assisted under this program including if they are required to move to satellite. These households would be eligible to receive either the Household Assistance Scheme or the \$400 assistance mentioned above, but not both. Eligible households will be contacted by Centrelink in advance of switchover.

Other matters

Eudunda is in the Adelaide switchover area, which will switch to digital-only broadcasting on 31 December 2013.

Burra is in the Spencer Gulf switchover area, which will switch to digital-only broadcasting on 15 December 2010.

If you have any questions about the matters discussed in this letter, please contact Viewer Access and Transmission Planning, at the Digital Switchover Taskforce, on 1800 069 244 or by email at selfhelp@dbcde.gov.au

Yours sincerely

Stephen Conroy

Minister for Broadband,

Communications and the Digital Economy

30 March 2010

Central Highlands Regional Council

Attn: Self-Help TV Manager

PO Box 21

EMERALD QLD 4720

Dear Sir/Madam

Broadcasters' offer to upgrade self-help television transmission sites from analog to digital

On 5 January 2010, I announced that under an agreement between the Government and commercial television broadcasters across Australia, broadcasters will upgrade a number of existing regional analog 'self-help' transmission facilities to operate in digital.

The Government has agreed to fund a satellite service to deliver digital television to all Australians living in blackspots where there is inadequate or no coverage provided by the broadcasters. As you may be aware, the Government introduced legislation into Parliament on 18 March 2010 to support the implementation of the satellite service. In addition, broadcasters agreed to upgrade a number of existing analog self-help sites to digital.

On 12 January 2010 I wrote to all local Councils to advise them of the Government's announcement and indicated that I would write further to operators of self-help facilities about their options in regard to moving to digital television.

I am now writing to inform you that the self-help facilities at Sapphire/Rubyvale has been identified by broadcasters as a candidates for upgrading from analog to digital. The final decision as to whether or not these facilities will be upgraded will depend on agreement being reached with the current transmitter licence holder about the conditions under which the upgrade will be carried out.

It is important that you understand that this is an offer by the broadcasters. While the Government has strongly encouraged broadcasters to take every possible step to ensure that the site can be converted in a timely fashion, the final decision about whether and how to convert the sites is a matter for negotiation between the current licence holder and the broadcasters.

I understand that you also operate self-help sitess at Anakie, Springsure and Willows which are not proposed to be upgraded by the broadcasters. Options for these sitess are set out below.

**Senate Environment, Communications and the Arts Legislation Committee Inquiry into the
Broadcasting Legislation Amendment (Digital Television) Bill 2010**

Answers to Questions on Notice

Broadband, Communications and the Digital Economy Portfolio

I understand that the facility you operate at Springsure provides SBS services only. The Government is currently considering options for SBS-only sites and will be writing to licensees of these sites when a decision has been made about them.

I am informed that a representative of the broadcasters will be contacting you in the near future to formally discuss their proposals and the terms of an agreement for conversion of the Sapphire/Rubyvale site.

For further information about the broadcasters' proposals, you should contact Alan Butorac at Regional Broadcasting Australia, on 0417 929 330 or by e-mail at alan@abden.com.au .

Terms of the offer from commercial broadcasters

The free-to-air commercial broadcasters have informed me that they are prepared to offer a no-cost transmitter equipment upgrade to the self-help broadcasting facilities at Sapphire/Rubyvale . This would cover replacement of the analog transmission equipment with digital transmission equipment at the existing self-help broadcasting site.

The digital equipment to be provided will transmit all digital services, including new digital multichannels, currently available in your licence area. Broadcasters will, as far as possible, ensure that the coverage of the digital transmitter is at least equal to the analog coverage currently provided by the existing analog facility. Broadcasters are also offering to provide maintenance of the upgraded equipment they install at their cost for an initial term of ten years. It is intended that the upgrade will take place at least six months before analog switch-off in your local area.

The offer being made by broadcasters is primarily related to the provision and maintenance of transmission equipment. Broadcasters have advised that the local community would be expected to continue to meet the costs of running the site, including:

- site-leasing costs,
- electricity,
- access charges, and
- other such costs associated with maintenance of the site infrastructure, such as air conditioning.

As part of this arrangement, continued access to the site for the broadcasters to provide equipment and maintenance would also need to be assured.

The local community will also be responsible for:

**Senate Environment, Communications and the Arts Legislation Committee Inquiry into the
Broadcasting Legislation Amendment (Digital Television) Bill 2010
Answers to Questions on Notice
Broadband, Communications and the Digital Economy Portfolio**

- keeping the site in appropriate physical condition,
- ensuring it continues to be suitable for a broadcasting facility, and
- undertaking any upgrades or improvements required to the transmission site infrastructure—such as the building, power, and antenna support infrastructure.

Broadcasters will:

- retain ownership of the equipment they provide,
- reserve the option to relocate the transmission site in future (for example, for the purpose of moving to a more suitable site), and
- hold the transmitter licence to broadcast the service.

Broadcasters have also advised that any digital transmission equipment upgrade will depend on satisfactory resolution of a range of technical matters, such as the availability of an adequate digital feed signal from the main transmitter in the licence area, and the availability of suitable radio-frequency spectrum.

An important consideration for you to be aware of is that the digital transmitters will use the same television channels as the analog service. This will mean that the analog service will be swapped directly to digital at a point in time (a so-called ‘hot swap’), with no simulcast period. All residents in the area would therefore need to have converted to digital before the change-over. Broadcasters have said that there will be some outages to television services at the site while the new equipment is being installed, tested and commissioned, but they will try to keep these to a minimum.

Local broadcasters are working with the Digital Switchover Taskforce and the Australian Communications and Media Authority (ACMA) to address technical and licensing matters.

Broadcasters will be contacting licensees to discuss these matters further, and to clarify any outstanding issues, including the need to reach agreement about a suitable date for the upgrade. Broadcasters are also likely to seek co-operation from you to provide notices to residents informing them of developments in relation to the upgrade.

New satellite service for people unable to access terrestrial services

It would be open to you to decide not to accept the broadcasters’ offer. In this case you would have two options. These options also apply to the self-help facilities at Anakie and Willows.

**Senate Environment, Communications and the Arts Legislation Committee Inquiry into the
Broadcasting Legislation Amendment (Digital Television) Bill 2010**

Answers to Questions on Notice

Broadband, Communications and the Digital Economy Portfolio

First, households who are currently served by an analog self help facility not being upgraded, and who are otherwise unable to receive reception of the digital television services terrestrially transmitted in their area, will be eligible to receive digital television services from the new digital television satellite service which I also announced on 5 January 2010.

The new satellite service will feature channels carrying programs from the Seven, Nine and Ten networks and the main national broadcaster services ABC1 and SBS ONE, together with digital channels ABC2, ABC3, ABCHD, SBS TWO, ONE HD, GO! and 7TWO. A new ABC 24 hour news channel is expected to replace the current ABCHD service later this year. The satellite service will be funded by the Government.

In addition to the news services offered by the national broadcasters, the satellite service will also provide viewers in regional Australia with access to the local news services currently broadcast by the commercial broadcasters in their relevant terrestrial licence areas. These services will be provided through a dedicated news channel.

To access the new satellite service, households will need to install satellite reception equipment, including a dish and a digital set-top box. The costs of installation will vary depending on the location, the size of the satellite receiving dish required and characteristics of the viewer's home.

The Government will provide a subsidy of \$400 to households in regional areas that are currently served by analog television self-help retransmission facilities who need to move to the satellite service because the self-help facility is not upgraded to digital. This subsidy will assist with the additional cost these households will incur in converting to satellite.

Alternatively, you may have reached a view that the local community would rather manage the conversion of the site to digital itself. If your community wishes to explore this option, you will need to talk to the Australian Communications and Media Authority (ACMA) about the availability of suitable television spectrum and other technical matters.

It is important to note that any communities electing to convert their self-help facilities themselves, rather than accessing the Government-funded satellite service, will need to do so at their own cost. You will also need to take account of the switchover date for your area (see below) as the site or sites would need to be converted in advance of switchover.

Finally, broadcasters have advised me that some areas currently served by a self-help facility may be able to receive digital services from an alternative digital terrestrial transmission site operated in the local area. This possibility should be discussed directly with broadcasters in your region, or with a suitable expert. Whether or not viewers in the area served by the self-help site will need satellite will depend on whether broadcasters are able to guarantee that adequate coverage will be available from a terrestrial site. This option would also require households to re-point their antennas towards the alternative site, or in some cases to obtain new antennas.

Household Assistance Scheme

The Government is implementing the Household Assistance Scheme to provide assistance to vulnerable Australians in the move to digital television. A household will be eligible for the Household Assistance Scheme where they own a TV, live within the area switching over, and where one or more residents are in receipt of the maximum rate of the:

- Age Pension
- Disability Support Pension
- Carer Payment
- Department of Veterans' Affairs (DVA) Service Pension or the DVA income-support supplement payment.

The scheme involves a government contractor visiting an eligible household to supply, install and demonstrate (at no cost to the householder) a high-definition set-top box—specifically chosen to ensure that it meets the needs of the elderly and people with a disability—and, where eligible, conduct any necessary antenna and cabling work, if required.

Eligible households served by self-help analog services will be assisted under this program including if they are required to move to satellite. These households would be eligible to receive either the Household Assistance Scheme or the \$400 assistance mentioned above, but not both. Eligible households will be contacted by Centrelink in advance of switchover.

Other matters

Sapphire/Rubyvale and Springsure are in the Capricornia switchover area, which will switch to digital-only broadcasting in the second half of 2011. The actual date at which switchover occurs within this period will depend on factors such as local conditions and community feedback, but will be published well in advance of switchover.

Anakie and Willows are in the Remote Central & Eastern Australia switchover area, which will switch to digital-only broadcasting in the second half of 2013. The actual date at which switchover occurs within this period will depend on factors such as local conditions and community feedback, but will be published well in advance of switchover.

Viewers in remote areas will be able to access the new satellite service well in advance of switchover. In the meantime, the current analog re-transmission arrangements can continue. Further information will be provided once the details of the service availability are finalised with the remote commercial broadcasters.

Communications and the Digital Economy

30 March 2010

Mid Western Regional Council

Attn: Self-Help TV Manager

PO Box 156

MUDGEE NSW 2850

Dear Sir/Madam

Broadcasters' offer to upgrade self-help television transmission sites from analog to digital

On 5 January 2010, I announced that under an agreement between the Government and commercial television broadcasters across Australia, broadcasters will upgrade a number of existing regional analog 'self-help' transmission facilities to operate in digital.

The Government has agreed to fund a satellite service to deliver digital television to all Australians living in blackspots where there is inadequate or no coverage provided by the broadcasters. As you may be aware, the Government introduced legislation into Parliament on 18 March 2010 to support the implementation of the satellite service. In addition, broadcasters agreed to upgrade a number of existing analog self-help sites to digital.

On 12 January 2010 I wrote to all local Councils to advise them of the Government's announcement and indicated that I would write further to operators of self-help facilities about their options in regard to moving to digital television.

**Senate Environment, Communications and the Arts Legislation Committee Inquiry into the
Broadcasting Legislation Amendment (Digital Television) Bill 2010**

Answers to Questions on Notice

Broadband, Communications and the Digital Economy Portfolio

I am now writing to inform you that the self-help facilities at Mudgee Town has been identified by broadcasters as a candidates for upgrading from analog to digital. The final decision as to whether or not these facilities will be upgraded will depend on agreement being reached with the current transmitter licence holder about the conditions under which the upgrade will be carried out.

It is important that you understand that this is an offer by the broadcasters. While the Government has strongly encouraged broadcasters to take every possible step to ensure that the site can be converted in a timely fashion, the final decision about whether and how to convert the sites is a matter for negotiation between the current licence holder and the broadcasters.

I understand that you also operate a self-help sites at Kandos which is not proposed to be upgraded by the broadcasters. Options for these sites are set out below.

I also understand that you operate a self-help facility at Gulgong which provides SBS services only. The Government is currently considering options for SBS-only sites and will be writing to licensees of these sites when a decision has been made about them.

I am informed that a representative of the broadcasters will be contacting you in the near future to formally discuss their proposals and the terms of an agreement.

For further information about the broadcasters' proposals, you should contact Alan Butorac at Regional Broadcasting Australia, on 0417 929 330 or by e-mail at alan@abden.com.au .

Terms of the offer from commercial broadcasters

The free-to-air commercial broadcasters have informed me that they are prepared to offer a no-cost transmitter equipment upgrade to the self-help broadcasting facilities at Mudgee Town. This would cover replacement of the analog transmission equipment with digital transmission equipment at the existing self-help broadcasting site.

The digital equipment to be provided will transmit all digital services, including new digital multichannels, currently available in your licence area. Broadcasters will, as far as possible, ensure that the coverage of the digital transmitter is at least equal to the analog coverage currently provided by the existing analog facility. Broadcasters are also offering to provide maintenance of the upgraded equipment they install at their cost for an initial term of ten years. It is intended that the upgrade will take place at least six months before analog switch-off in your local area.

The offer being made by broadcasters is primarily related to the provision and maintenance of transmission equipment. Broadcasters have advised that the local community would be expected to continue to meet the costs of running the site, including:

**Senate Environment, Communications and the Arts Legislation Committee Inquiry into the
Broadcasting Legislation Amendment (Digital Television) Bill 2010**

Answers to Questions on Notice

Broadband, Communications and the Digital Economy Portfolio

- site-leasing costs,
- electricity,
- access charges, and
- other such costs associated with maintenance of the site infrastructure, such as air conditioning.

As part of this arrangement, continued access to the site for the broadcasters to provide equipment and maintenance would also need to be assured.

The local community will also be responsible for:

- keeping the site in appropriate physical condition,
- ensuring it continues to be suitable for a broadcasting facility, and
- undertaking any upgrades or improvements required to the transmission site infrastructure—such as the building, power, and antenna support infrastructure.

Broadcasters will:

- retain ownership of the equipment they provide,
- reserve the option to relocate the transmission site in future (for example, for the purpose of moving to a more suitable site), and
- hold the transmitter licence to broadcast the service.

Broadcasters have also advised that any digital transmission equipment upgrade will depend on satisfactory resolution of a range of technical matters, such as the availability of an adequate digital feed signal from the main transmitter in the licence area, and the availability of suitable radio-frequency spectrum.

An important consideration for you to be aware of is that the digital transmitters will use the same television channels as the analog service. This will mean that the analog service will be swapped directly to digital at a point in time (a so-called ‘hot swap’), with no simulcast period. All residents in the area would therefore need to have converted to digital before the change-over. Broadcasters have said that there will be some outages to television services at the site while the new equipment is being installed, tested and commissioned, but they will try to keep these to a minimum.

**Senate Environment, Communications and the Arts Legislation Committee Inquiry into the
Broadcasting Legislation Amendment (Digital Television) Bill 2010**

Answers to Questions on Notice

Broadband, Communications and the Digital Economy Portfolio

Local broadcasters are working with the Digital Switchover Taskforce and the Australian Communications and Media Authority (ACMA) to address technical and licensing matters.

Broadcasters will be contacting licensees to discuss these matters further, and to clarify any outstanding issues, including the need to reach agreement about a suitable date for the upgrade. Broadcasters are also likely to seek co-operation from you to provide notices to residents informing them of developments in relation to the upgrade.

New satellite service for people unable to access terrestrial services

It would be open to you to decide not to accept the broadcasters' offer. In this case you would have two options. These options also apply to the Kandos self-help facility.

First, households who are currently served by an analog self-help facility not being upgraded, and who are otherwise unable to receive reception of the digital television services terrestrially transmitted in their area, will be eligible to receive digital television services from the new digital television satellite service which I also announced on 5 January 2010.

The new satellite service will feature channels carrying programs from the Seven, Nine and Ten networks and the main national broadcaster services ABC1 and SBS ONE, together with digital channels ABC2, ABC3, ABCHD, SBS TWO, ONE HD, GO! and 7TWO. A new ABC 24 hour news channel is expected to replace the current ABCHD service later this year. The satellite service will be funded by the Government.

In addition to the news services offered by the national broadcasters, the satellite service will also provide viewers in regional Australia with access to the local news services currently broadcast by the commercial broadcasters in their relevant terrestrial licence areas. These services will be provided through a dedicated news channel.

To access the new satellite service, households will need to install satellite reception equipment, including a dish and a digital set-top box. The costs of installation will vary depending on the location, the size of the satellite receiving dish required and characteristics of the viewer's home.

The Government will provide a subsidy of \$400 to households in regional areas that are currently served by analog television self-help retransmission facilities who need to move to the satellite service because the self-help facility is not upgraded to digital. This subsidy will assist with the additional cost these households will incur in converting to satellite.

Alternatively, you may have reached a view that the local community would rather manage the conversion of the site to digital itself. If your community wishes to explore this option, you will need to talk to the Australian Communications and Media Authority (ACMA) about the availability of suitable television spectrum and other technical matters.

**Senate Environment, Communications and the Arts Legislation Committee Inquiry into the
Broadcasting Legislation Amendment (Digital Television) Bill 2010**

Answers to Questions on Notice

Broadband, Communications and the Digital Economy Portfolio

It is important to note that any communities electing to convert their self-help facilities themselves, rather than accessing the Government-funded satellite service, will need to do so at their own cost. You will also need to take account of the switchover date for your area (see below) as the site or sites would need to be converted in advance of switchover.

Finally, broadcasters have advised me that some areas currently served by a self-help facility may be able to receive digital services from an alternative digital terrestrial transmission site operated in the local area. This possibility should be discussed directly with broadcasters in your region, or with a suitable expert. Whether or not viewers in the area served by the self-help site will need satellite will depend on whether broadcasters are able to guarantee that adequate coverage will be available from a terrestrial site. This option would also require households to re-point their antennas towards the alternative site, or in some cases to obtain new antennas.

Household Assistance Scheme

The Government is implementing the Household Assistance Scheme to provide assistance to vulnerable Australians in the move to digital television. A household will be eligible for the Household Assistance Scheme where they own a TV, live within the area switching over, and where one or more residents are in receipt of the maximum rate of the:

- Age Pension
- Disability Support Pension
- Carer Payment
- Department of Veterans' Affairs (DVA) Service Pension or the DVA income-support supplement payment.

The scheme involves a government contractor visiting an eligible household to supply, install and demonstrate (at no cost to the householder) a high-definition set-top box—specifically chosen to ensure that it meets the needs of the elderly and people with a disability—and, where eligible, conduct any necessary antenna and cabling work, if required.

Eligible households served by self-help analog services will be assisted under this program including if they are required to move to satellite. These households would be eligible to receive either the Household Assistance Scheme or the \$400 assistance mentioned above, but not both. Eligible households will be contacted by Centrelink in advance of switchover.

Other matters

Gulgong, Kandos and Mudgee Town are in the Central Tablelands and Central Western Slopes switchover area, which will switch to digital-only broadcasting in the first half of 2012. The actual

30 March 2010

Councillor Glenn Milne

Mayor

Mildura Rural City Council

PO Box 105

MILDURA VIC 3502

Dear Councillor Milne

Options for receiving digital television

On 5 January 2010, I announced that Government had reached an agreement with all television broadcasters which will ensure that communities that currently rely on analog self-help transmission facilities for their television services will be able to access the same number of digital services that are available in metropolitan areas.

As you are aware the Government has agreed to fund a satellite service to deliver digital television to all Australians living in blackspots where there is inadequate or no coverage provided by the broadcasters. As you may be aware, the Government introduced legislation into Parliament on 18 March 2010 to support the implementation of the satellite service. In addition, broadcasters agreed to upgrade a number of existing analog self-help sites to digital.

On 12 January 2010 I wrote to all local Councils to advise them of the Government's announcement and indicated that I would write again to operators of self-help facilities about their options for moving to digital television.

On 10 February 2010 I wrote to inform you that broadcasters would be upgrading the self-help facility at Underbool to digital and establishing a new facility at Ouyen.

Mildura Rural City Council also holds a licence for the self-help site at Murrayville. As you are aware, site upgrades are being carried out by broadcasters, and are not being funded by the Government. The choice of sites to be converted is therefore a matter for the broadcasters to determine. Broadcasters have provided me with a 'candidate' list of sites for conversion, which does not include the site at Murrayville.

In view of this, I am now writing to you to inform you of the options available to the Murrayville community served by the analog self-help site to move to digital television.

**Senate Environment, Communications and the Arts Legislation Committee Inquiry into the
Broadcasting Legislation Amendment (Digital Television) Bill 2010**

Answers to Questions on Notice

Broadband, Communications and the Digital Economy Portfolio

First, viewers served by self-help facilities that are not upgraded by broadcasters will be able to receive their television services from the new satellite service. The Government will provide a subsidy of \$400 to regional households that are currently served by analog television self-help retransmission facilities who move to the satellite service.

This subsidy will assist with the additional cost these households will incur in converting to satellite. Further details of this new subsidy will be announced in due course.

The new satellite service will be funded by the Government and will be available to any viewers who are unable to receive adequate reception of the terrestrial digital television services provided in their licence area.

The new satellite service will feature channels carrying programs from the Seven, Nine and Ten networks and the main national broadcaster services ABC1 and SBS ONE, together with digital channels ABC2, ABC3, ABCHD, SBS TWO, ONE HD, GO! and 7TWO. A new ABC 24 hour news channel is expected to replace the current ABCHD service later this year. The satellite service will be funded by the Government.

The new satellite service will also provide a dedicated news channel which will allow viewers in regional Australia to access the local news services currently being broadcast in their terrestrial licence area by their local commercial broadcasters. In addition to this dedicated commercial news channel, SBS news and state-based ABC news will also be available.

Besides providing communities currently reliant on self-help facilities access to an expanded range of digital-only channels for the first time, the satellite service will also offer the further benefit of relieving them of the cost of committing ongoing funding and resources to the maintenance and operation of the self-help facilities.

To receive the satellite service, households will need to install satellite reception equipment, including a dish and a digital set-top box. The costs of installation will vary depending on the viewer's location, the size of the satellite receiving dish required, and the characteristics of the viewer's home.

Alternatively, it is open to the community to upgrade the Murrayville services to digital itself. If you wish to explore this option, you will need to talk to the Australian Communications and Media Authority (ACMA) about the availability of suitable television spectrum and other technical matters. It is important to note that any communities electing to convert their self-help facilities themselves, rather than accessing the Government-funded satellite service, will need to do so at their own cost. You will also need to take account of the switchover date for your area (see below) as the site would need to be converted in advance of switchover.

Household Assistance Scheme

**Senate Environment, Communications and the Arts Legislation Committee Inquiry into the
Broadcasting Legislation Amendment (Digital Television) Bill 2010**

Answers to Questions on Notice

Broadband, Communications and the Digital Economy Portfolio

The Government is implementing the Household Assistance Scheme to provide assistance to vulnerable Australians in the move to digital television. A household will be eligible for the Household Assistance Scheme where they own a television, live within the area switching over, and where one or more residents are in receipt of the maximum rate of the:

- Age Pension
- Disability Support Pension
- Carer Payment
- Department of Veterans' Affairs (DVA) Service Pension or the DVA income-support supplement payment.

The scheme involves a government contractor visiting an eligible household to supply, install and demonstrate (at no cost to the householder) a high-definition set-top box—specifically chosen to ensure that it meets the needs of the elderly and people with a disability—and, where eligible, conduct any necessary antenna and cabling work, if required.

Eligible households served by self-help analog services who are required to move to the new satellite service would be eligible to receive assistance under the program to install the satellite service. These households would be eligible to receive either the Household Assistance Scheme or the \$400 assistance mentioned above, but not both. Eligible households will be contacted by Centrelink in advance of switchover.

Additional information

The Government is currently involved in discussions with broadcasters to finalise arrangements for the new satellite service, including viewer eligibility requirements for accessing the service, and timing of the introduction of the service. Further information about the details of the new satellite service will be made available when arrangements have been finalised.

Murrayville is in the Remote Central and Eastern switchover area, which will switch to digital-only broadcasting in the second half of 2013. The actual date at which switchover occurs within this period will depend on factors such as local conditions and community feedback.

Viewers in remote areas, including Murrayville, will be able to access the new satellite service well in advance of switchover. In the meantime, the current analog re-transmission arrangements can continue. Further information will be provided once the details of the service availability are finalised with the remote commercial broadcasters.

Dear Sir/Madam

Broadcasters' offer to upgrade self-help television transmission sites from analog to digital

On 5 January 2010, I announced that under an agreement between the Government and commercial television broadcasters across Australia, broadcasters will upgrade a number of existing regional analog 'self-help' transmission facilities to operate in digital.

The Government has agreed to fund a satellite service to deliver digital television to all Australians living in blackspots where there is inadequate or no coverage provided by the broadcasters. As you may be aware, the Government introduced legislation into Parliament on 18 March 2010 to support the implementation of the satellite service. In addition, broadcasters agreed to upgrade a number of existing analog self-help sites to digital.

On 12 January 2010 I wrote to all local Councils to advise them of the Government's announcement and indicated that I would write further to operators of self-help facilities about their options in regard to moving to digital television.

I am now writing to inform you that the self-help facilities at «Candidate_Sites» have been identified by broadcasters as candidates for upgrading from analog to digital. The final decision as to whether or not these facilities will be upgraded will depend on agreement being reached with the current transmitter licence holder about the conditions under which the upgrade will be carried out.

It is important that you understand that this is an offer by the broadcasters. While the Government has strongly encouraged broadcasters to take every possible step to ensure that the

**Senate Environment, Communications and the Arts Legislation Committee Inquiry into the
Broadcasting Legislation Amendment (Digital Television) Bill 2010
Answers to Questions on Notice
Broadband, Communications and the Digital Economy Portfolio**

site can be converted in a timely fashion, the final decision about whether and how to convert the sites is a matter for negotiation between the current licence holder and the broadcasters.

I am informed that a representative of the broadcasters will be contacting you in the near future to formally discuss their proposals and the terms of an agreement.

For further information about the broadcasters' proposals, you should contact Alan Butorac at Regional Broadcasting Australia, on 0417 929 330 or by e-mail at alan@abden.com.au

Terms of the offer from commercial broadcasters

The free-to-air commercial broadcasters have informed me that they are prepared to offer a no-cost transmitter equipment upgrade to the self-help broadcasting facility at «candidate_site». This would cover replacement of the analog transmission equipment with digital transmission equipment at the existing self-help broadcasting site.

The digital equipment to be provided will transmit all digital services, including new digital multichannels, currently available in your licence area. Broadcasters will, as far as possible, ensure that the coverage of the digital transmitter is at least equal to the analog coverage currently provided by the existing analog facility. Broadcasters are also offering to provide maintenance of the upgraded equipment they install at their cost for an initial term of ten years. It is intended that the upgrade will take place at least six months before analog switch-off in your local area.

The offer being made by broadcasters is primarily related to the provision and maintenance of transmission equipment. Broadcasters have advised that the local community would be expected to continue to meet the costs of running the site, including:

- site-leasing costs,
- electricity,
- access charges, and
- other such costs associated with maintenance of the site infrastructure, such as air conditioning.

As part of this arrangement, continued access to the site for the broadcasters to provide equipment and maintenance would also need to be assured.

The local community will also be responsible for:

- keeping the site in appropriate physical condition,

**Senate Environment, Communications and the Arts Legislation Committee Inquiry into the
Broadcasting Legislation Amendment (Digital Television) Bill 2010
Answers to Questions on Notice
Broadband, Communications and the Digital Economy Portfolio**

- ensuring it continues to be suitable for a broadcasting facility, and
- undertake any upgrades or improvements required to the transmission site infrastructure—such as the building, power, and antenna support infrastructure.

Broadcasters will:

- retain ownership of the equipment they provide,
- reserve the option to relocate the transmission site in future (for example, for the purpose of moving to a more suitable site), and
- hold the transmitter licence to broadcast the service.

Broadcasters have also advised that any digital transmission equipment upgrade will depend on satisfactory resolution of a range of technical matters, such as the availability of an adequate digital feed signal from the main transmitter in the licence area, and the availability of suitable radio-frequency spectrum.

An important consideration for you to be aware of is that the digital transmitters will use the same television channels as the analog service. This will mean that the analog service will be swapped directly to digital at a point in time (a so-called ‘hot swap’), with no simulcast period. All residents in the area would therefore need to have converted to digital before the change-over. Broadcasters have said that there will be some outages to television services at the site while the new equipment is being installed, tested and commissioned, but they will try to keep these to a minimum.

Local broadcasters are working with the Digital Switchover Taskforce and the Australian Communications and Media Authority (ACMA) to address technical and licensing matters.

Broadcasters will be contacting licensees to discuss these matters further, and to clarify any outstanding issues, including the need to reach agreement about a suitable date for the upgrade. Broadcasters are also likely to seek co-operation from you to provide notices to residents informing them of developments in relation to the upgrade.

New satellite service for people unable to access terrestrial services

It would be open to you to decide not to accept the broadcasters’ offer. In this case you would have two options.

You may have reached a view that the local community would rather manage the conversion of the site to digital itself. If your community wishes to explore this option, you will need to talk to

**Senate Environment, Communications and the Arts Legislation Committee Inquiry into the
Broadcasting Legislation Amendment (Digital Television) Bill 2010**

Answers to Questions on Notice

Broadband, Communications and the Digital Economy Portfolio

the Australian Communications and Media Authority (ACMA) about the availability of suitable television spectrum and other technical matters.

It is important to note that any communities electing to convert their self-help facilities themselves, rather than accessing the Government-funded satellite service, will need to do so at their own cost. You will also need to take account of the switchover date for your area (see below) as the site or sites would need to be converted in advance of switchover.

Alternatively, households who are currently served by an analog self help facility not being upgraded, and who are otherwise unable to receive reception of the digital television services terrestrially transmitted in their area, will be eligible to receive digital television services from the new digital television satellite service which I also announced on 5 January 2010.

The new satellite service will feature channels carrying programs from the Seven, Nine and Ten networks and the main national broadcaster services ABC1 and SBS ONE, together with digital channels ABC2, ABC3, ABCHD, SBS TWO, ONE HD, GO! and 7TWO. A new ABC 24 hour news channel is expected to replace the current ABCHD service later this year. The satellite service will be funded by the Government.

In addition to the news services offered by the national broadcasters, the satellite service will also provide viewers in regional Australia with access to the local news services currently broadcast by the commercial broadcasters in their relevant terrestrial licence areas. These services will be provided through a dedicated news channel.

To access the new satellite service, households will need to install satellite reception equipment, including a dish and a digital set-top box. The costs of installation will vary depending on the location, the size of the satellite receiving dish required and characteristics of the viewer's home.

The Government will provide a subsidy of \$400 to households in regional areas that are currently served by analog television self-help retransmission facilities who need to move to the satellite service because the self-help facility is not upgraded to digital. This subsidy will assist with the additional cost these households will incur in converting to satellite.

Household Assistance Scheme

The Government is implementing the Household Assistance Scheme to provide assistance to vulnerable Australians in the move to digital television. A household will be eligible for the Household Assistance Scheme where they own a TV, live within the area switching over, and where one or more residents are in receipt of the maximum rate of the:

- Age Pension
- Disability Support Pension

**Senate Environment, Communications and the Arts Legislation Committee Inquiry into the
Broadcasting Legislation Amendment (Digital Television) Bill 2010**

Answers to Questions on Notice

Broadband, Communications and the Digital Economy Portfolio

- Carer Payment
- Department of Veterans' Affairs (DVA) Service Pension or the DVA income-support supplement payment.

The scheme involves a government contractor visiting an eligible household to supply, install and demonstrate (at no cost to the householder) a high-definition set-top box—specifically chosen to ensure that it meets the needs of the elderly and people with a disability—and, where eligible, conduct any necessary antenna and cabling work, if required.

Eligible households served by self-help analog services will be assisted under this program including if they are required to move to satellite. These households would be eligible to receive either the Household Assistance Scheme or the \$400 assistance mentioned above, but not both. Eligible households will be contacted by Centrelink in advance of switchover.

Other matters

«Self-Help sites» are in the «List_of_switchover_areas» switchover area, which will switch to digital-only broadcasting «Switch_time_reference»

If you have any questions about the matters discussed in this letter, please contact Viewer Access and Transmission Planning, at the Digital Switchover Taskforce, on 1800 069 244 or by email at selfhelp@dbcde.gov.au

Dear Sir/Madam

Options for receiving digital television

On 5 January 2010, I announced that Government had reached an agreement with all television broadcasters which will ensure that communities that currently rely on analog self-help transmission facilities for their television services will be able to access the same number of digital services that are available in metropolitan areas.

The Government has agreed to fund a satellite service to deliver digital television to all Australians living in blackspots where there is inadequate or no coverage provided by the broadcasters. As you may be aware, the Government introduced legislation into Parliament on 18 March 2010 to support the implementation of the satellite service. In addition, broadcasters agreed to upgrade a number of existing analog self-help sites to digital.

On 12 January 2010 I wrote to all local Councils to advise them of the Government's announcement and indicated that I would write further to operators of self-help facilities about their options in regard to moving to digital television.

As site upgrades are being carried out by broadcasters, and are not being funded by the Government, the choice of sites to be converted is a matter for the broadcasters to determine. Broadcasters have provided me with a 'candidate' list of sites for conversion, which does not include the site at «Non_Candidate_Sites_list».

In view of this, I am now writing to you to inform you of the options available to the community served by the analog self-help site to move to digital television.

First, viewers served by self-help facilities that are not upgraded by broadcasters will be able to receive their television services from the new satellite service. The Government will provide a subsidy of \$400 to regional households that are currently served by analog television self-help retransmission facilities who move to the satellite service. This subsidy will assist with the additional cost these households will incur in converting to satellite. Further details of this new subsidy will be announced in due course.

**Senate Environment, Communications and the Arts Legislation Committee Inquiry into the
Broadcasting Legislation Amendment (Digital Television) Bill 2010**

Answers to Questions on Notice

Broadband, Communications and the Digital Economy Portfolio

The new satellite service will be funded by the Government and will be available to any viewers who are unable to receive adequate reception of the terrestrial digital television services provided in their licence area.

The new satellite service will feature channels carrying programs from the Seven, Nine and Ten networks and the main national broadcaster services ABC1 and SBS ONE, together with digital channels ABC2, ABC3, ABCHD, SBS TWO, ONE HD, GO! and 7TWO. A new ABC 24 hour news channel is expected to replace the current ABCHD service later this year. The satellite service will be funded by the Government.

The new satellite service will also provide a dedicated news channel which will allow viewers in regional Australia to access the local news services currently being broadcast in their terrestrial licence area by their local commercial broadcasters. In addition to this dedicated commercial news channel, ABC and SBS news will also be available.

Besides providing communities currently reliant on self-help facilities access to an expanded range of digital-only channels for the first time, the satellite service will also offer the further benefit of relieving them of the cost of committing ongoing funding and resources to the maintenance and operation of the self-help facilities.

To receive the satellite service, households will need to install satellite reception equipment, including a dish and a digital set-top box. The costs of installation will vary depending on the viewer's location, the size of the satellite receiving dish required, and the characteristics of the viewer's home.

Alternatively, it is open to the community to upgrade the services to digital itself. If your community wishes to explore this option, you will need to talk to the Australian Communications and Media Authority (ACMA) about the availability of suitable television spectrum and other technical matters. It is important to note that any communities electing to convert their self-help facilities themselves, rather than accessing the Government-funded satellite service, will need to do so at their own cost. You will also need to take account of the switchover date for your area (see below) as the site would need to be converted in advance of switchover.

Finally, broadcasters have advised me that some areas currently served by a self-help facility may be able to receive digital services from an alternative digital terrestrial transmission site operated in the local area. This possibility should be discussed directly with broadcasters in your region, or with a suitable expert. Whether or not viewers in the area served by the self-help site will need satellite will depend on whether broadcasters are able to guarantee that adequate coverage will be available from a terrestrial site. This option would also require households to re-point their antennas towards the alternative site, or in some cases to obtain new antennas.

Household Assistance Scheme

The Government is implementing the Household Assistance Scheme to provide assistance to vulnerable Australians in the move to digital television. A household will be eligible for the Household Assistance Scheme where they own a TV, live within the area switching over, and where one or more residents are in receipt of the maximum rate of the:

- Age Pension
- Disability Support Pension
- Carer Payment
- Department of Veterans' Affairs (DVA) Service Pension or the DVA income-support supplement payment.

The scheme involves a government contractor visiting an eligible household to supply, install and demonstrate (at no cost to the householder) a high-definition set-top box—specifically chosen to ensure that it meets the needs of the elderly and people with a disability—and, where eligible, conduct any necessary antenna and cabling work, if required.

Eligible households served by self-help analog services who are required to move to the new satellite service would be eligible to receive assistance under the program to install the satellite service. These households would be eligible to receive either the Household Assistance Scheme or the \$400 assistance mentioned above, but not both. Eligible households will be contacted by Centrelink in advance of switchover.

Additional information

The Government is currently involved in discussions with broadcasters to finalise arrangements for the new satellite service, including viewer eligibility requirements for accessing the service, and timing of the introduction of the service. In general, it is expected that viewers will be able to move to the new satellite service about six months before the switch-off of analog services in their area. Further information about the details of the new satellite service will be made available when arrangements have been finalised.

Dear Sir/Madam

Broadcasters' offer to upgrade self-help television transmission sites from analog to digital

On 5 January 2010, I announced that under an agreement between the Government and commercial television broadcasters across Australia, broadcasters will upgrade a number of existing regional analog 'self-help' transmission facilities to operate in digital.

The Government has agreed to fund a satellite service to deliver digital television to all Australians living in blackspots where there is inadequate or no coverage provided by the broadcasters. As you may be aware, the Government introduced legislation into Parliament on 18 March 2010 to support the implementation of the satellite service. In addition, broadcasters agreed to upgrade a number of existing analog self-help sites to digital.

On 12 January 2010 I wrote to all local Councils to advise them of the Government's announcement and indicated that I would write further to operators of self-help facilities about their options in regard to moving to digital television.

I am now writing to inform you that the self-help facility at «Candidate_Sites» has been identified by broadcasters as a candidate for upgrading from analog to digital. The final decision as to whether or not this facility will be upgraded will depend on agreement being reached with the current transmitter licence holder about the conditions under which the upgrade will be carried out.

It is important that you understand that this is an offer by the broadcasters. While the Government has strongly encouraged broadcasters to take every possible step to ensure that the site can be converted in a timely fashion, the final decision about whether and how to convert the sites is a matter for negotiation between the current licence holder and the broadcasters.

**Senate Environment, Communications and the Arts Legislation Committee Inquiry into the
Broadcasting Legislation Amendment (Digital Television) Bill 2010**

Answers to Questions on Notice

Broadband, Communications and the Digital Economy Portfolio

I understand that you also operate a self-help site at «Non_candidate_sites_» which is not proposed to be upgraded by the broadcasters. Options for this site are set out below.

I am informed that a representative of the broadcasters will be contacting you in the near future to formally discuss their proposals and the terms of an agreement.

For further information about the broadcasters' proposals, you should contact Alan Butorac at Regional Broadcasting Australia, on 0417 929 330 or by e-mail at alan@abden.com.au .

Terms of the offer from commercial broadcasters

The free-to-air commercial broadcasters have informed me that they are prepared to offer a no-cost transmitter equipment upgrade to the self-help broadcasting facility at «Candidate_Sites». This would cover replacement of the analog transmission equipment with digital transmission equipment at the existing self-help broadcasting site.

The digital equipment to be provided will transmit all digital services, including new digital multichannels, currently available in your licence area. Broadcasters will, as far as possible, ensure that the coverage of the digital transmitter is at least equal to the analog coverage currently provided by the existing analog facility. Broadcasters are also offering to provide maintenance of the upgraded equipment they install at their cost for an initial term of ten years. It is intended that the upgrade will take place at least six months before analog switch-off in your local area.

The offer being made by broadcasters is primarily related to the provision and maintenance of transmission equipment. Broadcasters have advised that the local community would be expected to continue to meet the costs of running the site, including:

- site-leasing costs,
- electricity,
- access charges, and
- other such costs associated with maintenance of the site infrastructure, such as air conditioning.

As part of this arrangement, continued access to the site for the broadcasters to provide equipment and maintenance would also need to be assured.

The local community will also be responsible for:

- keeping the site in appropriate physical condition,

**Senate Environment, Communications and the Arts Legislation Committee Inquiry into the

Answers to Questions on Notice

Broadband, Communications and the Digital Economy Portfolio

- ensuring it continues to be suitable for a broadcasting facility, and
- undertaking any upgrades or improvements required to the transmission site infrastructure—such as the building, power, and antenna support infrastructure.

Broadcasters will:

- retain ownership of the equipment they provide,
- reserve the option to relocate the transmission site in future (for example, for the purpose of moving to a more suitable site), and
- hold the transmitter licence to broadcast the service.

Broadcasters have also advised that any digital transmission equipment upgrade will depend on satisfactory resolution of a range of technical matters, such as the availability of an adequate digital feed signal from the main transmitter in the licence area, and the availability of suitable radio-frequency spectrum.

An important consideration for you to be aware of is that the digital transmitters will use the same television channels as the analog service. This will mean that the analog service will be swapped directly to digital at a point in time (a so-called 'hot swap'), with no simulcast period. All residents in the area would therefore need to have converted to digital before the change-over. Broadcasters have said that there will be some outages to television services at the site while the new equipment is being installed, tested and commissioned, but they will try to keep these to a minimum.

Local broadcasters are working with the Digital Switchover Taskforce and the Australian Communications and Media Authority (ACMA) to address technical and licensing matters.

Broadcasters will be contacting licensees to discuss these matters further, and to clarify any outstanding issues, including the need to reach agreement about a suitable date for the upgrade. Broadcasters are also likely to seek co-operation from you to provide notices to residents informing them of developments in relation to the upgrade.

New satellite service for people unable to access terrestrial services

It would be open to you to decide not to accept the broadcasters' offer. In this case you would have two options. These options apply to the site at «Non_candidate_sites_» which is not proposed to be upgraded by the broadcasters.

**Senate Environment, Communications and the Arts Legislation Committee Inquiry into the
Broadcasting Legislation Amendment (Digital Television) Bill 2010**

Answers to Questions on Notice

Broadband, Communications and the Digital Economy Portfolio

First, households who are currently served by an analog self help facility not being upgraded, and who are otherwise unable to receive reception of the digital television services terrestrially transmitted in their area, will be eligible to receive digital television services from the new digital television satellite service which I also announced on 5 January 2010.

The new satellite service will feature channels carrying programs from the Seven, Nine and Ten networks and the main national broadcaster services ABC1 and SBS ONE, together with digital channels ABC2, ABC3, ABCHD, SBS TWO, ONE HD, GO! and 7TWO. A new ABC 24 hour news channel is expected to replace the current ABCHD service later this year. The satellite service will be funded by the Government.

In addition to the news services offered by the national broadcasters, the satellite service will also provide viewers in regional Australia with access to the local news services currently broadcast by the commercial broadcasters in their relevant terrestrial licence areas. These services will be provided through a dedicated news channel.

To access the new satellite service, households will need to install satellite reception equipment, including a dish and a digital set-top box. The costs of installation will vary depending on the location, the size of the satellite receiving dish required and characteristics of the viewer's home.

The Government will provide a subsidy of \$400 to households in regional areas that are currently served by analog television self-help retransmission facilities who need to move to the satellite service because the self-help facility is not upgraded to digital. This subsidy will assist with the additional cost these households will incur in converting to satellite.

Alternatively, you may have reached a view that the local community would rather manage the conversion of the site to digital itself. If your community wishes to explore this option, you will need to talk to the Australian Communications and Media Authority (ACMA) about the availability of suitable television spectrum and other technical matters.

It is important to note that any communities electing to convert their self-help facilities themselves, rather than accessing the Government-funded satellite service, will need to do so at their own cost. You will also need to take account of the switchover date for your area (see below) as the site or sites would need to be converted in advance of switchover.

Finally, broadcasters have advised me that some areas currently served by a self-help facility may be able to receive digital services from an alternative digital terrestrial transmission site operated in the local area. This possibility should be discussed directly with broadcasters in your region, or with a suitable expert. Whether or not viewers in the area served by the self-help site will need satellite will depend on whether broadcasters are able to guarantee that adequate coverage will be available from a terrestrial site. This option would also require households to re-point their antennas towards the alternative site, or in some cases to obtain new antennas.

Dear Sir/Madam

Options for receiving digital television at self-help re-transmission facilities

On 5 January 2010, I announced that Government had reached an agreement with all free to air television broadcasters which will ensure that communities that currently rely on analog self-help transmission facilities for their television services will be able to access the same number of digital services that are available in metropolitan areas.

On 12 January 2010 I wrote to all local Councils to advise them of the Government's announcement and indicated that I would write further to operators of self-help television re-transmission facilities about their options in regard to moving to digital television. Our records indicate that you are the licensee of a self-help re-transmission facility, and I am now writing to you to provide this further information.

The Government has agreed to fund a Direct-To-Home (DTH) satellite service to deliver free to air digital television to all Australians living in areas where there is inadequate or no coverage provided by terrestrial broadcasts, and to all viewers in remote areas of Australia.

As you may be aware, the Government introduced legislation into Parliament on 18 March 2010 to support the implementation of the satellite service.

The satellite service is good news for remote Australian viewers. For the first time, remote area viewers will be able to see the same number of channels as is provided by broadcasters in metropolitan and most regional areas of Australia.

The new satellite service will be provided by the current remote licence area broadcasters, WIN and Prime in Western Australia, and Southern Cross Media and Imparja in other areas of Australia. The satellite service will feature remote broadcaster channels carrying programs from the Seven, Nine and Ten networks in standard definition and high definition, the main national broadcaster channels ABC1 and SBS ONE, and the additional digital channels ABC2, ABC3, ABCHD, SBS TWO, ONE HD, GO! and 7TWO. A new ABC 24 hour news channel is expected to replace the current ABCHD service later this year. The satellite service will be funded by the Government, and after the switchover to digital television in 2013 is expected to replace the existing satellite Remote Area Broadcasting Service (RABS).

**Senate Environment, Communications and the Arts Legislation Committee Inquiry into the
Broadcasting Legislation Amendment (Digital Television) Bill 2010**

Answers to Questions on Notice

Broadband, Communications and the Digital Economy Portfolio

With the introduction of the satellite service, operators of self-help facilities in remote areas now have two options to receive free to air digital television.

All viewers in remote licence areas currently receiving the RABS service through a self-help re-transmission service will be eligible to migrate to the new satellite service. To receive the satellite service, households will need to install satellite reception equipment, including a dish and a digital set-top box. The costs of installation will vary depending on the viewer's location, the size of the satellite receiving dish required, and the characteristics of the viewer's home. The Government will provide a subsidy of \$400 to households who convert from remote self-help re-transmission services to the new digital DTH satellite service.

For viewers in indigenous self-help communities, the Government will provide an increased subsidy to assist with the cost of moving to the satellite service. The detail of the indigenous satellite subsidy is still being finalised, but will reflect the increased cost of providing DTH services in remote Indigenous communities.

The Government also recognises the unique circumstances affecting a number of indigenous communities served by self-help retransmission services, including that a number of these communities provide for transmission of local or community based content. There are a number of complex issues that need to be considered in transitioning indigenous communities and I will be giving careful consideration to these over the next few months. However, the Government-funded satellite service will be the primary means by which the Government will support access to digital television in remote Australia.

Should communities with self-help services elect not to take up the Government-funded DTH satellite service, they will have the option of converting existing self-help retransmission services to digital themselves. If your community wishes to explore this option, you will need to talk to the Australian Communications and Media Authority (ACMA) about the availability of suitable television spectrum and other technical matters. It is important to note that any communities electing to convert their self-help facilities themselves, rather than accessing the Government-funded satellite service, will need to do so at their own cost. You will also need to take account of the switchover date for your area (see below) as the site will need to be converted in advance of switchover.

Household Assistance Scheme

The Government is implementing the Household Assistance Scheme to provide assistance to vulnerable Australians in the move to digital television. A household will be eligible for the Household Assistance Scheme where they own a TV, live within the area switching over, and where one or more residents are in receipt of the maximum rate of the:

- Age Pension;
- Disability Support Pension;
- Carer Payment;

**Senate Environment, Communications and the Arts Legislation Committee Inquiry into the
Broadcasting Legislation Amendment (Digital Television) Bill 2010
Answers to Questions on Notice
Broadband, Communications and the Digital Economy Portfolio**

- Department of Veterans' Affairs (DVA) Service Pension or the DVA income-support supplement payment.

The scheme involves a government contractor visiting an eligible household to supply, install and demonstrate (at no cost to the householder) a high-definition set-top box – specifically chosen to ensure that it meets the needs of the elderly and people with a disability – and where eligible, conduct any necessary satellite dish and cabling work, if required. Households who are eligible will be contacted by the Government in advance of switchover in their area.

Switchover dates

The remote broadcaster licence areas of Western Australia, and Remote Central and Eastern Australia, will switchover to digital in the second half of 2013. The actual date at which switchover occurs within this period will depend on factors such as local conditions and community feedback, but will be published well in advance of switchover.

Thus there is still a period of time before communities have to reach final decisions on when and how to convert. Viewers in remote areas will be able to access the new satellite service well in advance of switchover. In the meantime, the current analog re-transmission arrangements can continue. Further information will be provided once the details of the service availability are finalised with the remote commercial broadcasters.

I understand that you currently operate a self-help broadcasting facility in the «Non_Candidate_Site» area.

If you have any questions about the matters discussed in this letter, please contact Viewer Access and Transmission Planning, at the Digital Switchover Taskforce, on 1800 069 244 or by email at selfhelp@dbcde.gov.au

Yours sincerely

Stephen Conroy

Answers to Questions on Notice

Broadband, Communications and the Digital Economy Portfolio

Question No: [p 69]

Hansard Ref: on notice

Topic: Sites not to be converted

Senator Fisher asked:

Senator FISHER—Perhaps the department would on notice do the committee and the community the service of doing a comparison and identifying the current self-help sites which by default are left out—that is, which are not on your list 1 or list 2—which means they are left swinging, which may or may not have a consequence.

Answer:

The following is a list of all self help sites known to the Department which are not included on “list 1” of the broadcasters’ candidate list. These are sites which are not intended to be upgraded to digital by commercial broadcasters and include sites on “list 2” of the broadcasters’ list.

Question No: p 73

Hansard Ref: In writing

Topic: NOTIFICATION OF SELF-HELP CONVERSION

Senator Fisher asked:

On notice, can you indicate to the Committee what will be that provision of notice, what the Department considers to be adequate notice and—you have said that in the vast majority of cases you will—can you indicate those circumstances in which adequate notice will not be provided and why not?

Answer:

It is anticipated that six months notice of conversion will be provided to viewers who will receive their services from a converted self-help facility at switchover.

It has not been possible to provide six months notice to viewers that are reliant on the self-help facility in Underbool as switchover is to occur in Mildura/Sunraysia on 30 June 2010 and broadcasters only agreed to convert the facility early in 2010.

However, whether a self-help facility is to be converted to digital, and the date on which the conversion is to occur, is dependent on decisions made independently by broadcasters and self-help licensees. The Department is working closely with broadcasters and once broadcasters and self-help licensees have determined to convert a self-help facility will seek to advise viewers as early as possible about their switchover options.

**Senate Environment, Communications and the Arts Legislation Committee Inquiry into the
Broadcasting Legislation Amendment (Digital Television) Bill 2010**

Answers to Questions on Notice

Broadband, Communications and the Digital Economy Portfolio

Question No: 1 to 10

Hansard Ref: In Writing

Topic: ACCESS TO THE NEW SATELLITE PLATFORM

Senator Ludlam asked:

- 1) Does this Bill guarantee commercial broadcasters access to the new satellite platform, but leaves it to other services currently on the Aurora platform, such as the publicly-funded narrowcasters National Indigenous Television Network (NITV) and Westlink, to negotiate with the new satellite broadcasting service licensees and or ABC and SBS to gain access?
- 2) If (Q.1) is not the case, how does the Bill deal with access to the new platform for each of the following groups:
 - (a) Publicly-funded narrowcasters currently on the Aurora platform, including NITV and Westlink;
 - (b) Community TV broadcasters; and
 - (c) Publicly funded datacasters
 - (d) The three primary commercial broadcasters?
- 3) How can NITV and the above types of licensed free to air TV services currently on Aurora be confident that:
 - (a) They will be included on the new satellite platform on fair, reasonable and equitable terms if they seek to be and have the capacity to pay;
 - (b) They will be included in the platform Electronic Program Guide (EPG) and conditional access and associated subscriber management system if they seek such access and have the capacity to pay?
- 4) Will the homes that currently access their free to air TV services DTH from the Aurora platform (and hence have DTH access to services such as NITV) be able to access NITV through the same set top box (STB) used to receive the new commercial and national TV services - after they convert to the new free to air TV DTH satellite platform?
- 5) Is it true that the only way for this [the scenario outlined in (4), above] to happen is for NITV, Westlink and any others in a similar situation to purchase new transponder capacity on the new platform?
- 6) How much would such capacity cost and is that capacity available?
- 7) If NITV, Westlink etc have to pay for extra satellite transponder capacity and ancillary services in order to be on the new DTH free to air TV satellite platform:
 - (a) With whom would they contract for the satellite capacity and other services such as multiplexing, uplinking, electronic program guide (EPG) and conditional access and associated subscriber management services provided?
 - (b) What competitive process was used to determine this (or these) 'supplying' entity(ies)?

**Senate Environment, Communications and the Arts Legislation Committee Inquiry into the
Broadcasting Legislation Amendment (Digital Television) Bill 2010**

Answers to Questions on Notice

Broadband, Communications and the Digital Economy Portfolio

- (c) What competitive process was used to determine the supplier of satellite transponder capacity?
- (d) How will the EPG developed for the new satellite platform work and what may be the licensing fees related to any associated software that organisations like NITV will have to pay should they be included in the EPG and conditional access and associated subscriber management services. ?

8) Is it true that if NITV, Westlink etc are not included on the new DTH free to air TV platform that homes will need:

- (a) Two different free to air DTH TV satellite reception systems in their house (ie decoders and in home distribution) for both Aurora and the new platform attached to each TV set and recording device;
- (b) Two separate remote controls; and
- (c) Would have to switch platforms each time viewers wished to move from watching Seven Central to NITV, for example;
- (d) in order to access NITV and the full range of commercial and National free to air TV services (and all of the above questions assume that Aurora and the new satellite platform are on the same satellite and use the same polarity – otherwise even a second satellite dish might be required as well).

9) Is the Government in a position to direct the managing entity of the new free to air TV DTH satellite platform to include a non commercial or National free to air TV service (such as NITV) to have access to the platform, conditional access system and its EPG? Where and how is this 'power' expressed in the Bill? Does the Government have a policy of ensuring such access?

10) What is the Government's intention for services currently delivered to homes DTH via Aurora once the Aurora platform is closed down

Answer:

The primary purpose of the Bill is to amend provisions of the *Broadcasting Services Act 1992* and the *Copyright Act 1968* to facilitate the delivery of digital television services by satellite. It establishes the legislative framework for the commercial broadcasting digital television services delivered as part of the new satellite service that will deliver the same number of services that are available in metropolitan areas to remote viewers and those located in metropolitan and regional black spots. The Bill does this by creating three new satellite licence areas for the delivery of commercial television channels, and a new class of commercial television licence for the delivery of those services under proposed section 38C. It further determines the range of services that are authorised by the section 38C licences, sets out conditions applying to those licences including the commercial services that are to be provided, and creates obligations on certain commercial broadcasters to contribute channels.

Selection of the platform provider for the satellite service is a commercial matter for the broadcasters who will provide services on the satellite having regard to, amongst other things, satellite capacity and technical requirements. Details of the technical arrangements for the service are being dealt with through funding agreements between the commercial broadcasters delivering the service and the Government.

**Senate Environment, Communications and the Arts Legislation Committee Inquiry into the
Broadcasting Legislation Amendment (Digital Television) Bill 2010**

Answers to Questions on Notice

Broadband, Communications and the Digital Economy Portfolio

The *Broadcasting Services Act 1992* does not provide for the guaranteed access of free to air broadcasters, such as narrowcasters or community television, to the Aurora platform. Similarly, there are no provisions in the Bill relating to access for such parties to the satellite transmission platform. However, there is nothing in the Bill preventing other free to air broadcasters such as narrowcasters or community television from obtaining access to the satellite platform. In addition, it is a condition of the grant deed entered into with commercial broadcasters to deliver the satellite service that the broadcasters must not do anything that would restrict any providers of: national broadcasting services; commercial radio broadcasting services; community broadcasting services; or open narrowcasting broadcasting services from negotiating with the satellite platform provider to achieve access to the satellite service.

Access to satellite capacity for additional broadcasting services, and arrangements relating to the Electronic Program Guides and conditional access systems which are part of the new satellite service, are matters for commercial negotiation with the commercial broadcasters providing the satellite service, and the satellite service provider (Optus Communications Networks Pty Ltd) contracted by those commercial broadcasters for the provision of satellite capacity. Access to the current Aurora platform is similarly a matter for commercial access and to the Department's knowledge the Government does not currently have any direct role in satellite access for services delivered by Aurora.

The existing Aurora platform is expected to continue until at least the end of 2013. The new satellite platform will operate in parallel with Aurora, although the commercial and national broadcasting services available on Aurora will cease operating after switchover (ongoing availability of the Aurora platform itself is a matter for Optus). However, there are a number of differences between the technical configurations of the Aurora service and the new service, and Aurora set top boxes will not be able to be used for the new satellite services. Conversely, a set top box which receives the new satellite service cannot be used to view the Aurora service. If viewers wish to view Aurora specific services they will need to retain the Aurora set top box. However, they will not need to switch platforms to access Seven Central and NITV as both of these services are available – along with remote commercial and national broadcaster services - from the Aurora platform. A single satellite dish is expected to be able to be used for both the new satellite service and Aurora platform services.

The Government is funding the delivery of commercial and national broadcasting services on the new satellite service. This includes the cost of satellite capacity for these services. Any services wishing to transition from Aurora to the new platform will need to enter into their own negotiations for satellite capacity. The cost of this capacity is a matter for these negotiations.

On 16 April 2010 the Government announced that it will continue funding for the National Indigenous Television (NITV) Service with \$15.2 million ensuring its operation for the next 12 months. The Government also announced that it will start a review into its investment in the Indigenous broadcasting and media sector to be coordinated by the Department of Environment, Water, Heritage and the Arts. The review will inform considerations of free-to-air carriage of Indigenous television and radio content, including options for the carriage on new digital broadcasting platforms, including the satellite service.
