

Hi I wish to make a short submission to the senate inquiry into the NT nuclear waste dump. I am totally against any such waste dump in the NT or in any other location within Australia. Nuclear waste knows no bounds and is extremely dangerous. It could easily enter the ground water and cause much damage for thousands of years to come. Once the ground water is contaminated that could travel vast distances and be devastating to anybody exposed to it. Any waste produced within Australia should be recycled at the expense of the producer or be kept above ground at or near the point of production where it can be monitored and resealed when required. The government should keep Australia safe and steer us clear of this dirty industry. We do not want it and do not need it.

Thanks very much  
Kind Regards  
Shane Drew
