

## Environment Protection and Biodiversity Conservation Amendment Bill 2013 [Provisions]

If this is the last few policies that you as a government will pass. Make them the most important ones. Make them ones to remember.

Water is the most important aspect for life on this planet, to exist. This is why we look for water on other planets like Mars.

Coal seam gas will destroy our limited water supply in Australia and will compromise the health of all Australians. You must pass a proper law that will protect our water supply. And keep Australia a healthy country with healthy kids. Keep it in the federal's hands. And protect water resources from coal seam gas. Don't just line the miners with more money and even more control.

Kind regards  
Marnie Cotton
