

Why ARENA is important?

Tania Urmee

ARENA's mission was, 'To improve competitiveness of renewable energy technology, and increase the supply of renewable energy'.

After ARENA launched, it supported many ground breaking developments in renewable energy supplies. Many countries in the world supported renewable energy technology but ARENA shows innovativeness in terms of supporting technology through a vision of making Australia the best in renewable energy technology sector. Some of the exemplary projects are the nano-scale particles that boost light absorption via a small antenna, accompanied by inline inspection tools for PV manufacturing to reduce energy wastage, printing solar cells etc. R &D plays very important role in development technology in a country.

Please think of our future and the future of next generation and do not repeal ARENA..
