

---

Future generations must be preserved, by natural selection. To abort one gender in favour for another is a good way to cause future generations much anguish.

As a voter, I will not support any party that willingly agrees to gender selection.

I object strongly to any thought that our taxes or medical costs should be used for such actions.

If parents of other persuasions wish to indulge in gender selection, then may I suggest that this is murder at its very core.

The future of our Nation must rest on natural selection.

Women are an equal part of society, and if the natural selection of gender is not adhered to as sure as night follows day imbalance in population can only result in turmoil.

The future dentists, doctors, nurses, mechanics, scientists, parliamentarians, leaders, mums, teachers, but to name a few, will be lost forever, think of your future generations, are you going to support their demise. If any of these children are murdered because you passed legislation, then I am so sorry for your dereliction of care and duty for their welfare.
