

**February 2010 - 2**

**To the Senate Standing Reference Committee on Rural and Regional Affairs and Transport – aircraft noise in Bickley**

Further to my recent letter I wanted to encourage you to check the frequency of the flights over the Bickley valley in Western Australia – I believe there is a website where you can do this. When you do then imagine that they are flying directly over your roof with the noise reverberating through you. It is not only the frequency in timing but the frequency of the noise that is a problem.

Please help me access a portable noise monitor – I desperately need SOMEONE to understand what we are going through.

Still on edge,

Monica Durcan and family
