

Environment Protection and Biodiversity Conservation Amendment Bill 2013 [Provisions]

I implore the Senate inquiry to put controls into place to protect our drinking water, waterways and environment re CSG and its impact on all of these.

There has been so little research into the effects of this process that to hand out licences without a full research program is simply irrational.

History has shown us time and again that our impact has the potential to destroy our finely balanced environment so let's learn from that and protect our air and water, for without these, we all lose.
