Subject: No nuclear power in Australia
Date: Thursday, 8 August 2019 3:33:25 AM

Hello,

I have read that the Govt is having an enquiry into nuclear power plants in Australia.

I am writing to urge Against this as the dangers of this type of power generation far outweigh the benefits. The waste must be stored somewhere- no one wants it near them- how about it gets stored near Parliament House in Canberra? Its impossible to guarantee safe storage for the 1000's of years needed.

The risk of sabotage is real, despite all safeguards, people And systems are fallible. Again the risks of catastrophic events is terrifying. Both for our generation and future ones.

I have also read that it is a very thirsty form of energy and we are I believe the driest continent. How will that work?

Also, it's not clean! Co2 emissions are way higher than those generated by other clean energies such as wind, thermal etc.

Please put \$'s and research into Cleaner energies such as solar, wind, wave etc.

regards,

Glenda Maxwell
