Subject: CS-062: Project position status - after resolution of negative votes
Importance: High

Dear Committee member,

As Standard Australia's attempted to obtain consensus over the above two projects, we wish to inform you current status of those two projects;

Project 4215: DSFBA - Determination of flue gas emission

	Agree	Disagree	No response
Australia	11	3	2
NZ	4	1	1

Since the Consensus of Australian manufacturers is 50% (2 members out of 4 manufacturing representatives with negative votes), we do not have full consensus of the Australian manufacturing sector to publish this draft as the AS/NZS Standard.

As a result we are left with 2 options from an Australian perspective ;

OPTION 1: Disjoint from New Zealand and terminate the project and withdraw the existing AS/NZS 4013:1999 standard as most of members agreed that current standard has flaws.

OPTION 2 : Remove the specification on Efficiency , Emission limits and Marking and develop the draft as a test method only.

Project 4216: DSFBA - Determination of power output and efficiency

	Agree	Disagree	No response
Australia	13	1	2
NZ	5	-	1

OPTION: Since the committee consensus is achieved we can publish this draft as AS/NZS 4012:2007 replacing the current AS/NZS 4012 standard.

Expecting to hear your views on these options by COB **1st May 2007**.

Best regards,
Chandima
