

We acknowledge the traditional custodians whose ancestral lands we live and work upon today

Inquiry into the provision of General Practice and related primary health services to outer metropolitan, rural and regional Australians

Professor Lucie Walters

Acknowledgment

Uncle Lyndsay Thomas
Nukunu Elder

What is rural generalist practice?

Features of Clinical Courage

1. Standing up to serve anybody and everybody in the community
2. Accepting uncertainty and persistently seeking to prepare
3. Deliberately understanding and marshalling resources in the context
4. Humbly seeking to know one's own limits
5. Clearing the cognitive hurdle when something needs to be done for your patient
6. Collegial support to stand up again

Konkin J , Grave L, Cockburn E, Couper I, Stewart R, Campbell D, Walters L. (2020) Exploration of rural physicians' lived experience of practicing outside their usual scope of practice to provide access to essential medical care (clinical courage): an international phenomenological study *BMJ Open* <https://bmjopen.bmj.com/content/bmjopen/10/8/e037705.full.pdf>

The evidence

If supported,

- rural background students
- who undertake prolonged rural community placements
- supervised by well-supported rural generalists

...are significantly more likely to become the next generation of small town rural doctors.

Dr Holly Deer
GP at Crystal Brook
ARCS alumnus 2006

The challenges

Rural background

You can't become a rural doctor if you cannot see the whole pathway

Prolonged rural community placements

It takes about 12 years and a community to take a high school student and transform them into a small town rural doctor (rural generalist)

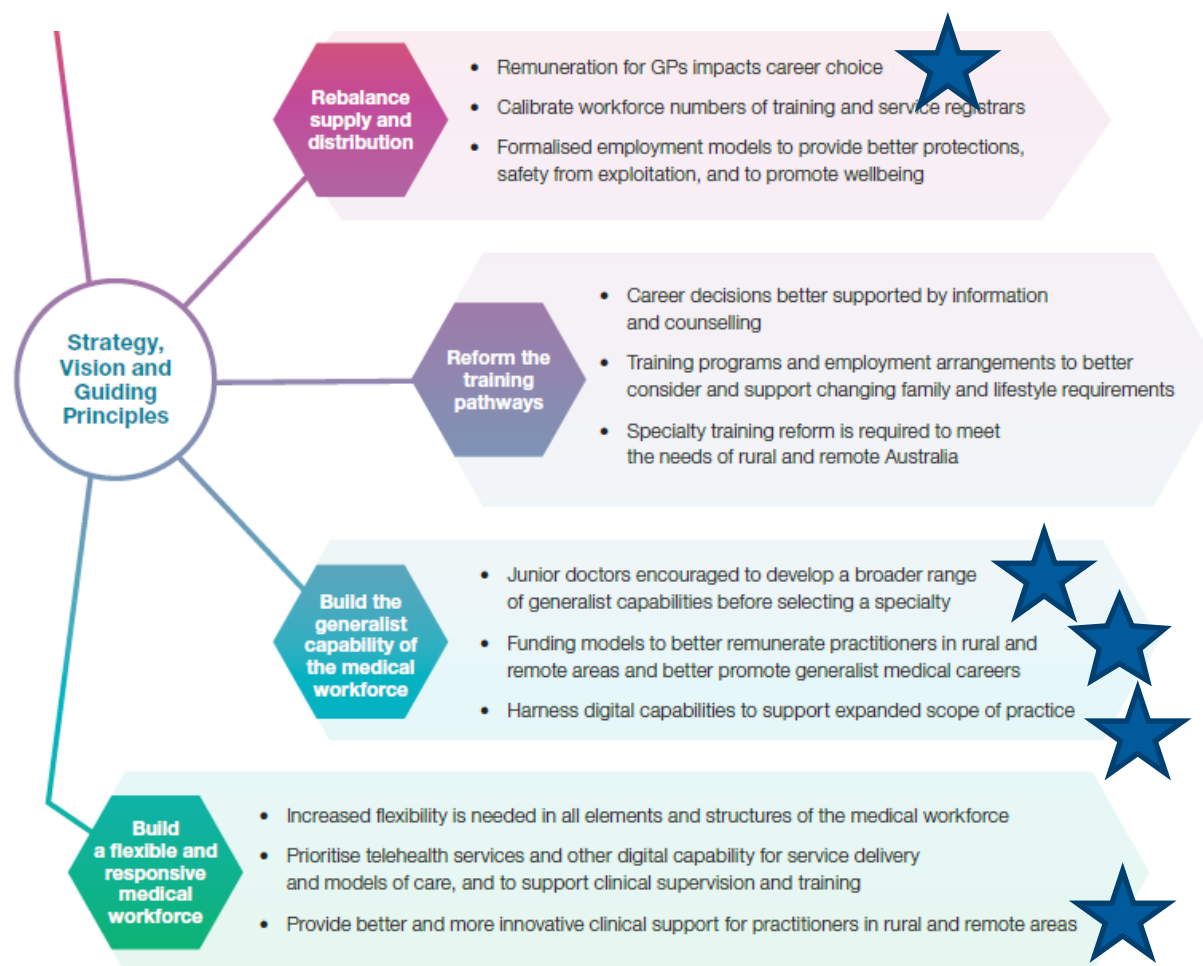

Supervised by well supported rural generalists

Increased complexity and cost of primary care, Medicare freeze, Federal/state funding divide, models of care, COVID

Dr Marion Crompton
GP at Clare
ARCS alumnus 2004

National Medical Workforce Plan

Adelaide Rural Clinical School

We acknowledge the traditional custodians whose ancestral lands we live and work upon today

Medical School Academic Program

- Yr 4 surgery (9 weeks)
- Yr 5 full year
- Tr 6 rural GP (4 weeks)

Supporting junior doctor training (full year)

- 5 Interns
- 4 PGY2

Rural generalist training

Rural Clinical Schools have been very successful for Regional Australia, but have not made the difference needed for rural and remote Australia.

Concept model – our proposal for ARMA

Eight communities with RFDS presence across Australia. Initially Pt Augusta, Bairnsdale, Port Hedland and Alice Springs

- 5 students commence in Year 1 of the medical course annually
- Spend the majority of their six years of medical school training in and around this location (30 learners per region)
- Medical school articulates with prevocational and RG vocational training around the same locations (30 doctors-in-training per region)
- Medical workforce is consolidated through academic roles

Orientating medical training to create a remote Indigenous medical workforce

- Select students who choose remote with 50% Indigenous profile
- Train students where the workforce is needed
- Provide a well supported community of practice
- Provide early continuous authentic service-learning
- Ensure trainees can see a connected pathway to becoming a rural generalist

Progress

- Seeking Commonwealth funding
- Ongoing consultation to ensure effective collaborative models
- Admissions working party seeking to consult with local and academic stakeholders
- Trial of Year 2 preclinical program in 2022 in Pt Augusta

In summary:

- Support rural GPs adequately
- Develop models of care when provide enough in-hours well funded activity to support group practice: models of care which include: primary care, clinical teaching, and in-reach to maintain skills
- Select the right people for rural medical training
- Immerse them in the environment you want them to work in

Australian Remote Medicine Academy
offers a way forward for rural practice in Australia.
