

## Example 1

Dear Sir/Madam,

I am most unhappy about the Disinformation Bill. It should not be passed. Please do not include my name when you publish this.

My main arguments are:

- \* The Bill's censorship undermines public trust in the law by risking a healthcare dictatorship and potentially allowing only the government's view on the pandemic, harming public health.
- \* The MisInformation Bill undermines social media by empowering the eSafety Commissioner, who has already censored content informally and sought improper retaliation against X Corp.
- \* The Misinformation Bill allows the Government to control the narrative, making it the sole arbiter of truth while exempting itself from the same regulations.
- \* The Bills' censorship unjustly protects the powerful, ironically making banks appear untrustworthy and bringing the law into disrepute.
- \* The MisInformation Bill poses a serious risk to democracy by enabling social media censorship and giving ACMA and the eSafety Commissioner sweeping powers to control online discourse.
- \* The MisInformation Bill favors BigTech because enormous fines are out of reach for small startups, while larger companies can afford to comply with ACMA's costly requests.
- \* The MisInformation Bill threatens Free Speech by enabling social media companies to censor content, including differing political views, as highlighted by the Human Rights Commission.

It is time to oppose the Disinformation Bill.

Yours sincerely,

## Example 2

Dear Sir/Madam,

This Misinformation Bill is unacceptable. It is the Senate's responsibility not to approve it. Please publish this anonymously.

My main arguments are:

- \* The Misinformation Bill unjustly makes the Government an arbiter of truth, despite their frequent errors and exemption from the laws themselves.
- \* The MisInformation Bill pressures social media to censor users economically, while only X Corp has resisted, facing improper retaliation from the eSafety Commissioner.

Please reject this Misinformation Bill.

Yours sincerely,
