

Effectiveness of Airservices Australia's management of aircraft noise.

I understand In late December the Federal Government released an Aviation Policy Paper. It was disappointing that it did not address this issue in Perth, focusing more on Sydney, which already has a noise insulation scheme.

I live in Lathlain and I experience very noisy condition at certain times, for example Friday morning (particularly 9.00 am to 11.00am). One day I remember nearly 30 planes went on top my roof. I feel that my windows shatter due to unbearable noise. It appears that more planes are going over my house in certain days than other days.

In my opinion ASA can do more to counter this problem. I strongly think, some thing should be done sooner than later as number of planes coming to Perth going to go up than down due to resources boom and population increase. It is frustrating that Perth did not get its fair share while Sydney is considered favourably.

I hope my comments would be considered favourably and ASA will provide compensation to affected residents to mitigate the noise level and make arrangement to reduce the noise level. If residents are provided with some insulation, air conditioning and double glazing, it could be very helpful.

Thanks in advance.
