

I would like to register my extreme concern as an Australian citizen with respect to the lack of factual data and studies on the long term effects of CSG fracking on water resources such as ground water subterranean aquifers and water catchment zones in Australia. We cannot live without water, our crops, animals and flora and fauna need this generation to act on behalf of the long term good of this great land. Please do not sell out the Australian people to these short sighted profit driven animals, all we ask is that proper science is carried out by independant authorities, I hope I am not too late to make a small difference. I could not locate the subject on the submissions page, thanks for your support.
