**Subject:** Toxic waste  
**Date:** Friday, 5 March 2010 11:17:51 AM

---

I have made submissions in the past which have taken much of my personal time, which I don't get paid for, unlike politicians. So this time I will not spend much time putting references and research attachments in this submission, because nobody pays any attention to it. [www.fluoridealert.org](http://www.fluoridealert.org)

I am against dumping any toxic waste, be it in the ground or in the water eg. Fluoride and the reasons should be obvious to each individual who has attended school and been taught science-chemistry.

The Greens Internationally are against putting fluoride in drinking water (which often contains mercury, lead, arsenic etc), but the Australian Greens party seem to be silent on this matter and continue to allow town by town to have this toxic waste put straight into our drinking water and poison our children slowly. This is why I and many of my family and friends will not vote for the Greens until you make a stand against fluoride. If you stop fluoride being put in the water, you can legislate that NO TOXIC WASTE be put in Australian water or ground. It is very simple really. If you really want to make the population believe you are the greens party you must be green all the way not pretend like Peter Garrett.

Good luck

Anna L Michalik
