

## Environment Protection and Biodiversity Conservation Amendment Bill 2013 [Provisions]

Please take into account these proposed new laws regulating the water impacts of coal seam gas and large coal mining when assessing projects for approval. Groundwater is vital for the survival of agriculture and in a precarious future, this ought to be immediately apparent to anyone with any brains. Coal seam gas mining is indefensible, and its impacts far too great to be even considered. Adopt the new laws, or be reviled forever.
