

Please find attached a submission into the Environment Protection and Biodiversity Conservation Amendment Bill 2013 [Provisions]

It is so obvious that clean water and clean air, are essential for Australia's future, for agriculture, tourism, and to encourage people to live in regional areas. I cannot comprehend that the rush into CSG extraction is being done in such a rushed and unconsidered way. Big companies will reap the profits, while farmers, residents and all tax-payers will have to live with and pay for the long-term consequences. We hope you can and will do something to stop this craziness.

Kind regards

Name: Perri Wain
