

Innovative Research Universities

Who We Are

The IRU is a network of seven comprehensive researching universities comprising Charles Darwin University, Flinders University, Griffith University, James Cook University, La Trobe University, Murdoch University and The University of Newcastle. All of our universities all rank in the top 5% of the world's top universities.

Our Purpose

IRU member universities bring comprehensive university teaching and research to areas where higher education participation and attainment is low. Through research relevant to the region, and the creation of graduates, IRU universities strengthen the social and economic prosperity of both their own areas and the nation.

The IRU Difference

1. Encouraging University Participation

IRU members support students from all backgrounds and capabilities, reflecting not just local populations, but also the need to reduce State and national gaps in participation. IRU members have a demonstrated commitment to educating students from disadvantaged backgrounds, recognising the power of university education to improve opportunities and outcomes for the individual, their community and the nation.

As evidence of this commitment, while enrolling 15% of the nation's domestic undergraduate students, IRU members enrol:

- 25% of all Aboriginal and Torres Strait Islander students;
- 29% of students from remote areas and 21% of those from regional areas; and
- 19% of all students from low socioeconomic backgrounds

2. Addressing Local and Regional Challenges

Our members exist in regions of low higher education attainment and considerable population growth. IRU members bring comprehensive teaching and research activities to areas where regionally engaged research and the creation of graduates can strengthen social and economic prosperity.

IRU members:

- Teach 28% of the nation's university students enrolled in campuses outside the large State capitals and Canberra; and
- Receive 43% of the research income for universities primarily located outside of the large State capitals and Canberra.

3. High Quality Problem-Centred Research

IRU research is often characterised by its translational nature. It is research that tests the findings of basic research in practical, real world contexts to determine the validity of the research and develop mechanisms to put the research to work.

IRU Research focuses is of critical importance to the communities in which we are based linking their challenges to issues of national and global importance.

In the 2012 Excellence in Research for Australia, our members' research was at or above world standard in 74% of all assessed fields.

We encourage greater industry driven research reflecting the IRU's approach to link research to problems needing solutions.

4. Engagement with Asia

IRU members led Australian universities' engagement with Asia, creating the first Asian Studies degree.

Our current programs include:

- ***Joint Program with Malaysian Research Universities Network*** to stimulate international collaboration in research and teaching and learning. This project brings together the expertise of academics in both the IRU and Malaysian research intensive universities to lay the groundwork for long term partnerships
- ***IRU Scholars in Asia***, which creates opportunities for students from across the network to access short term student mobility experiences in Asia
- ***The Asian Languages Network*** to create opportunities for all IRU students to study any of our four Asian languages of Indonesian, Japanese, Chinese and Hindi.

IRU, 3 October 2014

Higher Education and Research in regions and for residents of the regions

In consideration of the *Higher Education and Research Reform Amendment Bill 2014* the impact on the residents of Australia's regions and on the universities which are based on those communities is one issue of importance.

It affects discussion of the Government's proposed Commonwealth Scholarship Scheme and the proposals for a structural adjustment fund to ensure a smooth transition to the new arrangements.

The IRU submission to the Senate proposes that:

The Commonwealth Scholarships Scheme should pool the eligible funds from all providers as the basis for matching the funds for scholarships with the students for whom they are intended. This will encourage students to choose their university based on their educational preferences.

Universities need support to make the transition to a market based system through a structural adjustment fund. IRU universities serve outer metropolitan and significant non-state capital city regions. We need to test how well the potential students in our catchment areas will respond.

It is useful to know which universities operate from the regions and their relative contributions.

Regional Australia refers to all areas outside of Sydney, Melbourne, Brisbane, Adelaide, Perth and Canberra. In these areas higher education achievement tends to be low, with usually one university providing campus based teaching and research. There are similar issues for IRU members targeting the outer metropolitan areas of the State capitals.

The IRU members are major players for regional students and regional areas:

- we teach 21% of the nation's regional and 29% of the nation's remote students;
- we teach 28% of students taught from regional based campuses; and
- three of our members earn 43% of the research income generated by the 13 universities based primarily in regional areas.

The attached IRU briefing paper sets out the three measures with supporting data.

6 October 2014

Providing Higher Education and Research in regions and for residents of the regions

This paper outlines three measures of the quantum of research and teaching undertaken from regional Australia and for residents of regional Australia. It shows the contribution of IRU members and of universities from the other groupings. The three are:

1. Teaching of students from regional Australia
2. Teaching from regional Australia
3. Research from regional Australia

The first measure shows where people from regional Australia enrol; the second and third show the level of higher education and research activity delivered from regional Australia.

Regional Australia refers to all areas outside of Sydney, Melbourne, Brisbane, Adelaide, Perth and Canberra. In these areas higher education achievement tends to be low, with usually one university providing campus based teaching and research. In some data sets there is a distinction between 'regional' and 'remote'.

There are similar issues for IRU members and other universities targeting the outer metropolitan areas of the State capitals. The measures below do not attempt to capture that activity.

Teaching of students from regional Australia

This measure considers a domestic undergraduate student's permanent home address in determining regional or remote status. Two different measures are published in Department of Education statistics, the first using the 2006 MCEETYA definition and the second the 2011 ASGS definition. The 2011 ASGS definition is the one used by the Department in determining funding for programmes targeting these students, including the Regional CGS loading.

Both MCEETYA 2006 and ASGS 2011 are based on the ARIA+ measure of remoteness, which classifies locations based on their relative proximity to service centres (towns and cities) of various sizes. MCEETYA 2006 wholly excludes cities with a population of more than 100,000 (including Cairns, Townsville, Gold Coast and Newcastle) from the regional definition. The ASGS 2011 looks at all statistical areas individually, so that Cairns and Townsville are classified as "Outer Regional" mainly due to their distance from Brisbane. Students from other large cities outside, but in closer proximity to, the State and National Capitals are not deemed as regional.

Tables 1 to 3 show 2013 domestic undergraduate enrolments for both definitions, setting out the number of students, their distribution among IRU and other university groups, and their proportion of all domestic undergraduate students. IRU members have a higher number of regional students when using the more current 2011 ASGS definition. The RUN submission to the Higher Education and Research Reform (HERR) Amendment Bill inquiry used the 2006 MCEETYA in its figures for determining access to the proposed regional adjustment fund.

Using the 2011 ASGS measure, IRU members enrol 21% of the nation's regional and 29% of the nation's remote students. Within the IRU the proportion of students classified as regional or remote ranges from 10% at Griffith to 92% at James Cook.

Data for all universities is at Appendix One.

Table 1: Number of Regional and Remote Domestic Undergraduate students 2013

National Total	18%	1%	20%	1%

Teaching from regional Australia

This measure considers teaching done from regional Australia, rather than the origin of students. It includes all students undergraduate and postgraduate, Australian and international.

Based on data provided by the Department of Education 'regional' is defined as any campus located location outside of the greater metropolitan regions of Sydney, Melbourne, Brisbane, Adelaide and Perth and the Australian Capital Territory. These regions are defined based on the ABS Greater Capital City Statistical Areas. This definition therefore includes as regional major centres outside capital cities that would not be considered regional in the 2011 ASGS definition including the Gold Coast and central Newcastle.

On this measure 41% of IRU member students are taught from regional campuses, 50% from State and national capital city campuses with the remaining 9% in overseas campuses. There is considerable variance, with the proportion of regionally taught students ranging from 0 at Murdoch to 98% of the cohort at Charles Darwin.

The IRU is the base for 28% of Australia's regionally taught students, the RUN 32% and the other universities 37% (almost all enrolled in four universities: Tasmania, Charles Sturt, Wollongong and Deakin).

Data for all universities is at Appendix Two.

Table 4: Students by Campus Location - 2013

Provider Group	Regional	Capital	Overseas	Other
IRU	79893	96634	17291	0
RUN	90714	11275	2399	0

Research from regional Australia

Regional research metrics are harder to determine as data is not reported by researcher location. Tables 7 to 9 include research income for those universities whose primary research effort is conducted from regional areas. This captures research that may have an explicitly local focus and research that does not.

The 13 universities included are three IRU members (Charles Darwin, James Cook and Newcastle), all six RUN members and four unaligned universities. Despite having significant regional research presence, Griffith and Deakin are excluded given their substantial research footprints in Brisbane and Melbourne respectively.

The research income from these universities is 12% of national research income, providing a crude guide to the proportion of research not based in the State capitals and Canberra. The three IRU members earn 43% of the research income generated by the 13 universities.

Table 7: Research Income for Regional Providers – 2012

Higher Education Provider	Competitive Grants	Other Public Sector	Industry and Other	CRC Funding	Total

Appendix 1 – Regional and Remote Students by Home Location

The tables below include regional and remote domestic undergraduate students as determined by the student's permanent home address using both the 2006 MCEETYA and 2011 ASGS measures for:

- Total regional and remote students by University;
- A university's regional and remote students as a proportion of the national total; and
- Regional and remote students as a proportion of the university's total enrolment.

Appendix 2 – Regional Students by Campus Location

The tables below include all students by their campus location, for:

- Total students by University by campus location;
- A university's student enrolments by campus location as a proportion of the national total; and
- Students by campus location as a proportion of the university's total enrolment.

'Regional' in the tables below is defined as being any area in Australia outside of the greater metropolitan areas of Sydney, Melbourne, Brisbane, Perth and Adelaide and the Australian Capital Territory as defined by the Australian Bureau of Statistics Greater Capital City Statistical Areas.

'Other' refers to those students whose campus is located in a postcode classified as being both in a capital city and a regional area and those students for whom no campus information is available.
