

To whom it may concern:

I am writing to voice my concern in with the way the federal government has chosen Muckaty as a possible sight.

- It seems the government has paid off through the NLC a group of aboriginal traditional owners with no consultation with other associated families or community.
- The government is exposing this unique Barkly landscape to real risk by proposing to cart Nuclear Waste through the landscape
- It is on record that there was leakage and spillage of Nuclear Waste material that was carted to Woomera.
- By having a facility in such a remote location the government is exposing our community to the real threat of terrorism.
- It is on record that long haul transport has accidents, this poses a real threat to our environment and people.
- The cattle industry in the Barkly is the most productive in the NT, simply by placing such a facility in our community jepordises our overseas trade as it gives the people we trade with a tool to discount or block our product.
- It Appears there has been no real EIS study and as a local am baffled how the government could think it safe to build such a facility on a known fault line.

Regards Geoff.
