

Please find attached a submission into the Environment Protection and Biodiversity Conservation Amendment Bill 2013 [Provisions]

I am very concerned about the integrity of our groundwater, which provides me with my pure drinking water on a daily basis.

I do not drink 'tap water' due to all the contaminants that led to various dis-eases in my body, and now my alternative springwater supply is being threatened.

And I am not the only one who drinks from our local natural water supply.

Our precious resources need to be protected and respected.

And besides that, gas is again NOT a renewable resource and still doesn't provide Australia with the sustainable solution we have been asking for!!!

Kind regards
