

Subject: Proposed Waste Dump
Date: Thursday, 4 March 2010 8:18:33 PM

Apart from the decision making flaws re the Muckaty Station nuclear waste dump, it seems clear that there is a future agenda for this plan which involves the approval by the Australian government of the use of nuclear power for the production of electricity. So the government gives us the option of power from uranium or coal. but not of course from the range of alternative power sources available to us and used by other more advanced countries. Tweedle Dum or Tweedle Dee or both. And, of course, in the backyards of the aborigines who have no right of appeal.

This Labour government has sadly let the Australian people down
