

I am submitting my ideals for the NDIS. I am actually not sure of what I am doing as there has been very little information given to the public about what disabilities and who are going to be included.

The main features I think would have **the biggest community impact** after living with a Polio sufferer for 20years and becoming disabled myself through an accident at work are as follows.

1. Give people with disabilities the free choice of the type of service they use.
2. Minimise the amount of times they have to tell their story.
3. Give access to reliable and thorough information about support options they and their carers can use.

The **main Support types** I consider most important for NDIS to provide are as follows:

4. Equipment and home/vehicle modification
5. Support for the family and carers
6. In home care and domestic assistance
