

Dear Madam, Sir,

I would like to submit my opinion in support of the use of wind energy and the building of wind farms.

Wind power is clean and safe. It produces no air pollution and emits no toxic gases. It reduces the use of fossil fuel and the emission of the greenhouse gas carbon dioxide.

Wind farms won't have an adverse impact on the scenery of the site environment. I personally quite like these giant structures erected in an otherwise barren and undeveloped area. Wind farms can be potential tourist attractions.

The economic benefits of wind power are many. There are costs of installation and maintenance of wind turbines and transmission lines. But because wind energy is free, the price of wind power will be cheaper when more power is produced. In the long run, with economy of scale in place, lower electricity price can be expected. Investment in wind farms and the associated transmission facilities provides growth opportunities to local economies. It creates job opportunities for the construction, equipment and transmission line maintenance trades in local communities. Wind farms provide land lease revenue for farmers in addition to their normal crop and livestock production.

Kind regards,

Ming Wu
