

In relation to the impact of native vegetation laws and legislated greenhouse gas abatement measures I submit as follows :

1. The laws have slowly contributed to the destruction of my livelihood (which is also the case for hundreds of farmers in this area). This regulation and bureaucratic interference practically took my rights relating to my land from me without any authorization or consultation creating a middle age peasant class which must obey.
2. The legislation has provided grounds and assistance for the illegal and corrupt actions of local authorities of which I was a victim.(and for this reason I do not want my name to be published as I am fearful of the possible repercussions).I am aware of the gravity of my accusations against the local authority and I am prepared to provide full particulars of what occurred.
3. The impact of the legislation has contributed to the failure of my marriage.
4. The legislation has considerably diminished the value of my property.

Yours faithfully
