

Re: Citizen(s) Support for Water Protection and Biodiversity

Water is an immeasurably valuable resource to all life. These news laws before the Senate are important towards returning the 'logic' into ecological regard for the impacts on our environment from the coal mining and coal seam gas industries.

The unnerving report on ABC's 4 Corners revealed another State Government disregard for the rights and responsibilities of upholding environmental management. It's imperative to involve the Federal Environment Minister who can refuse projects when evaluated against the impacts on water.

We encourage these news laws into the Senate and hope they'll be passed into law before the election, as our environment and it's protection are non negotiable! It also seems disrespectful to our farmers, who are permanent caretakers of the land, (upon which we rely on their produce) to not have a say over what happens on it?! Thank you for the opportunity to write this letter of support towards empowering the interconnected.
