Standing committee on
Health + Aged Care

Inquiry into Biotoxin-
related illness.

Dear Secretary.

Please accept this report to the
inquiry into your records

Re point 1 - Prevalence.

I live in Byron shire, a district
of high rainfall, forested.

Point 4 - Intersection

- After several exposures to pesticide
- 1986 - pesticide Tilt used on bananas
 - 1995 - renting a house with open
pesticide drums in basement
 - 1999 - being downwind of spraying,

I became Multi-Chemical-Sensitive -
allergic to eats, penicillin, alcohol,
mushrooms, + many inorganic chem-
icals

Then I became Electro-Sensitive,
allergic to computers, mobile phones,
electric transformers etc.

Recently a tick bite on the leg
swelled to 6 inches diameter. Anti-
biotic Doxilin made me quite ill

As penicillin is a mould, + regarding the other organic allergies listed above, please consider that I have Biotoxin illness as a past condition.

Please note that inorganic chemicals can cause Biotoxicity

Also 3/4 of Electro-Sensitives have previously been Multi-chemical-Sensitive.

Borrelia tick disease in Australia (similar to Lyme disease in US) needs to be recognised by doctors, + scientists

Point 7 - related matters.

Ironically my father Sir Philip Stott BT was the architect who designed the first penicillin factory in the war.

Please acknowledge receipt of this letter

Thank you

Yours faithfully

Nympa Stott
