

Environment Protection and Biodiversity Conservation Amendment Bill 2013 [Provisions]

I have been campaigning for the rights of landowners to stop coal seam gas mining and coal mining for years due to the certainty that the fossil fuel industry is outdated, whereas sustainable energy is "doable" now. The technology is here and it needs strong direction from a strong federal government to make it happen now.

Protect our already battered environment from these polluting industries.

Keep farmland, waterways and the great artesian basin safe from the "cowboy" coal industry.

Our small town of Burringbar decided 98% against the coal seam gas industry in this area and the majority wanted it kept out of this country.

We are not a 3rd world country without a democracy. Please keep it this way.

Yours sincerely  
Trish Mann
