

PALING YARDS TRADING Co.

Dear Senate Committee,

I am making a late submission to the Senate Community Affairs Committee.

As a professional farmer I support the concept of wind farms in rural areas of NSW for a number of reasons

- They add employment to the local community
- They add income to the farmers who have towers on their properties which is then spent in the local community
- They allow the production of green energy

I do not believe that there are any significant reasons that Wind Farms should not be built on most farming land in Australia as a source of non polluting energy.

It is proven technology that is operating now.

Regards

Richard Bell
