

Just a note:

Aircraft noise will become more of an issue in the summer months, when the Christmas holiday season is upon us (the airlines are constant). At night windows can not be left open allowing the cool breeze in, they are always closed on our [very](#) hot summer nights, I run the airconditioner all nights.... we are in the low season at the moment!

Why not do a survey at Curtin University in the middle of their exams, at the beginning of the summer. Accommodation for many students is under this flight path.

Cheers Marg. Major
