

The laws as proposed do not go far enough in ensuring to the people of Australia that their right to NOT have any CSG drilling/mining/exploration in OUR OWN country of Australia is not removed.

We do NOT want any further disturbance and damage to our precious underground water supplies/aquifers which stretch beneath the whole of Australia and are inter-connected in amazing geological formations that stretch from the Gulf of Carpentaria to the sea in S.A.

All the river systems east of the Great Divide are also connected in some way to each other and also back into west of the Great Divide. Without this remaining Australia will become a complete desert.

There has already been disgusting corruption of processes which prove that our beautiful country and all life upon it has already been threatened and affected permanently by disgusting selfish international interests and wealthy businessmen. It must stop now COMPLETELY and FOREVER.

Any proposal which does not guarantee our rights to say NO to everything connected to this CSG disease is not an acceptable law. Without guarantee of groundwater there will be NO guarantee for any primary industries of any sort, no tourism, no life.

The FEDERAL GOVERNMENT must create laws NOW before the forthcoming election.

Laws which are suitable and CANNOT BE OVERTURNED in the future will be the only ones acceptable to voters. State Governments cannot be trusted for they have already shown their corrupt, untrustworthy hands!

Kind regards
Jill Adam
