

Public Governance, Performance and Accountability Amendment (Vaccine Indemnity) Bill 2023

Dear Committee members,

Before I go on with my submission regarding the Vaccine Indemnity Bill, I would like to ask you one question;

Why should pharmaceutical companies NOT be held responsible for any damage or death caused by their product?

With every other item or activity, be it food, vehicles, toys, skin products, boating, etc, the manufacturer is responsible when their product causes ill-health, danger or death.

So again, I ask; why should pharmaceutical companies be exempt? Why are they allowed to profit from something which can cause irreparable harm?

As the parent of a child who was injured by a vaccine over 40 years ago, I have followed the vaccine debate and the ever-increasing vaccination schedule very closely. Vaccines DO cause severe and sometimes deadly side effects. NO company or corporation should be allowed to cause such devastation and grief with indemnity.

Each body is different and each body will react in a different manner to various substances. And because vaccines can cause death and disability it is immoral and unconscionable to mandate vaccines. If the past two years have taught us anything, it is that the mandating of vaccines has caused immense suffering on many levels.

There are many scientific studies which prove that vaccines are not safe for everyone. One such article covers this topic: <https://vaccineimpact.com/2019/fully-vaccinated-vs-unvaccinated-children-studies-the-big-cdc-cover-up-linking-vaccines-to-autism/>

Here is a link to just some of the settled court cases in the USA proving that vaccines cause harm: <https://www.mctlaw.com/vaccine-injury/cases/>

Scientific papers in the National Library of Medicine show that vaccines can cause infant death. Put yourself in this position; What if this were YOUR CHILD who died? Would you be happy to say "Oh, well, the drug company got their payment and I suffer the consequences and grieve my dead child."?

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC3170075/>

I could go on and on with many more links to studies but it would be pointless. There really is only one question you need to consider and answer: **Why should pharmaceutical companies NOT be held responsible for any damage or death caused by their product?**

Kind regards,

Ann Marie Klarich
