
Public Governance, Performance and Accountability Amendment (Vaccine Indemnity) Bill 2023

To the Committee

This is an email with reference to the above Header.

I am disappointed that it has come to this when much of the facts about the seriousness of this vaccinations have caused irreparable harm, even maiming or death.

There should be no idemnity for those companies who foreknew these subsequent and multiple vaccines would fail to do as they said it would, and that was to eliminate the spread of C-19.

Anyone involved in the sinister coverup who also foreknew of the risks involved, should be help accountable.

Australia in an island, a rather large one compared to some, and we are so far from the C-19 spread of the UK, USA, and Europe. We are well isolated from those countries and the need for any vaccine would have been unnescessary if precautions were taken by eliminating any human traffic to and from Australia.

We are a proud nation and have no need to be controlled by any other country, because at the present time, most leaders of those overseas countries are in a worse state than Australia - and many Australians would prefer to keep it that way.

I thank you for reading my submission and hope you make the right decision that rules for the heart of the country and not from outside influences or the head that says we need to keep sweet with the other countries.

As Australians, we did not vote for any overseas country to rule us, we chose who we wanted in to do that job, and now its up him/her to follow through and put Australia and its people first and forewmost!

Sincerely
Ms Barb Mason
