**SENATE RURAL AND REGIONAL AFFAIRS AND TRANSPORT
REFERENCES COMMITTEE**

Inquiry into management of the Murray-Darling Basin

Public Hearing Monday 10 September 2012

Questions Taken on Notice – National Irrigators' Council

HANSARD, PG 7

Senator XENOPHON: Mr McMahon, you gave some very powerful evidence on 3 April of this year in Mildura. You had your South Australian River Communities hat on, and that of the Central Irrigation Trust. You are now giving evidence on behalf of the National Irrigators' Council, and you have a very respected position there. Isn't there a problem with the way the rules are structured for those early adopters of water infrastructure efficiency measures, and that would particularly affect South Australia in the context of a national plan?

Mr McMahon: Correct. One of the issues that we are putting forward as a community is for a Water Industry Alliance proposal, which will see significant water handed back to the Commonwealth in response to investment in our communities, and we have put forward a proposal for that investment in the communities. The difficulty we have had with the old rules is that we do not fit within the rules and the guidelines that are there, so we have actually asked for the guidelines to be broadened.

Senator XENOPHON: What is government doing about that?

Mr McMahon: We are in discussion between the state and the federal governments for that to occur.

Senator XENOPHON: Could you give, on notice, because I have run out of time, some more details to the committee on that, because I would find that very useful in the context of a report by this committee.

Mr McMahon: Yes, I can do that.

**SENATE RURAL AND REGIONAL AFFAIRS AND TRANSPORT
REFERENCES COMMITTEE**

Inquiry into management of the Murray-Darling Basin

Public Hearing Monday 10 September 2012

Questions Taken on Notice – New South Wales Irrigators' Council

HANSARD, PG 8

CHAIR: How do you redirect to an overbank flow? You say the 390 gigalitres of water did not include any floodwater. Where did you get that information from?

Mr Gregson: I said this to you during the break, so I might need to say it again for the benefit of the full committee. It is our understanding that the calculation of 380 gigalitres in the long-term average extraction limit of 173 gigalitres does not include any over-bank flows. That was confirmed for me this afternoon by one of the proponents of the proposal, and I am more than happy to provide further information on notice should you request that.

CHAIR: Yes, you had better give us that on notice.

**SENATE RURAL AND REGIONAL AFFAIRS AND TRANSPORT

Inquiry into management of the Murray-Darling Basin

Public Hearing Monday 10 September 2012

Questions Taken on Notice – New South Wales Irrigators' Council

HANSARD, PG 8

CHAIR: How do you redirect to an overbank flow? You say the 390 gigalitres of water did not include any floodwater. Where did you get that information from?

Mr Gregson: I said this to you during the break, so I might need to say it again for the benefit of the full committee. It is our understanding that the calculation of 380 gigalitres in the long-term average extraction limit of 173 gigalitres does not include any over-bank flows. That was confirmed for me this afternoon by one of the proponents of the proposal, and I am more than happy to provide further information on notice should you request that.

CHAIR: Yes, you had better give us that on notice.

Answer

The information was provided to us by the NSW Office of Water, specifically by Commissioner Harriss.

It is our understanding that Commissioner Harriss, in appearing before the Committee after us, answered this question specifically.

**SENATE RURAL AND REGIONAL AFFAIRS AND TRANSPORT
REFERENCES COMMITTEE**

Inquiry into the management of the Murray-Darling Basin

Public Hearing Monday 10 September 2012

Questions Taken on Notice – NSW Office of Water

1. HANSARD, PG 36-37

CHAIR: Having been through the Murrumbidgee floodplain and back through the back of Yanga?

...

Mr Harriss: We have done some initial works to have a look at the existing infrastructure. There are a whole lot of irrigation channels. The way they do it is that they pond that water, they put it on this paddock this year and put it on that paddock the next year. You probably know pretty well how they do it.

CHAIR: I do.

Mr Harriss: The idea is to reconfigure it so you can get better environmental outcomes at that site but also to enable an additional 3,000 megalitres per day to pass through the channel system into the river downstream at the Balranald choke. That will enable the Commonwealth environmental water holder to say, 'Here's the supplementary water,'—which, as you quite correctly pointed out, is during periods of above-regulated flow, so it is higher flow and it is when the environment would probably get it naturally. The environmental water holder can ask, 'Do I divert it here for environmental purposes or do I allow it to travel downstream to maybe divert it at Chowler or Hatter Lakes or wherever further downstream?'

CHAIR: In diverting it from the Murrumbidgee floodplain, what did the environmental studies say about the impact?

Mr Harriss: We have identified that what is being used in Nimmie-Caira now is providing some environmental dividend, because they divert water through the regulator into a channel and then it passes down some parts of a floodway, which quite correctly provides some sort of environmental value. But, if you are an irrigator and you have a diversion point on the Murrumbidgee or the Laughlin River, if you divert it into a channel and it goes through to provide some environmental benefits, that is well and good, but you have the right to divert that, to pipeline it and to stop that happening.

CHAIR: I said this earlier—and you would be aware if you had been there, and these blokes have been to see you—how many acres are we talking about of formed-up bays?

Mr Harriss: I do not know off the top of my head. We can take that on notice.

2. HANSARD, PG 39-40

CHAIR: On behalf of Australia's taxpayers, let's get down to the sums. I was very much involved in what was going to be the alleged original buyback of the lower Lachlan, if you recall—Juanbung and Boyong and that—which was a con job where the Commonwealth, with Robert Hill as the minister, said no because the remedial cost of all of that was outrageous. What is the remedial cost approximation of this country?

Mr Harriss: I do not think we have really set aside a cost for physical remedial works, but we have set aside the costs of the reconfiguration works, which will facilitate the better distribution of water for environmental purposes.

...

Mr Harriss: We have put out a couple of public documents which said that we have put to the Commonwealth under the proposed plan, which includes significant infrastructure components, that the value of that works is at the market value of the water recovered for the Commonwealth times a correction factor. That recognises, and New South Wales completely supports, that the investment in infrastructure works generates a sound environmental-social outcome and you do not get that from recovering water

CHAIR: I'm the cocky, right? Good luck to them if they get away with it. I understand that you are prepared to pay two and a quarter times the market value of the water. We do not know what the market value of the water is, so that could be a figure that is completely distorted depending on what you value the water at.

Mr Harriss: But, as I said, the Commonwealth have a formula for valuing the water and for valuing the different products.

CHAIR: But you must know, because the sellers know what that value is. I think the taxpayers are entitled to know.

Mr Raft: The active trades of supplementary water are recorded on our website.

CHAIR: But what is it? You are the guys in charge, for God's sake.

Mr Harriss: I do not know what the last trades were and, quite frankly, Senator—

CHAIR: Can you take all that on notice?

Mr Harriss: We can take it on notice and provide that stuff, but we typically try to avoid—

CHAIR: Thank you.

3. HANSARD, PG 41

Senator XENOPHON: Okay, although I note that the Wentworth Group of Concerned Scientists did table a report from the Centre of Policy Studies at Monash University by Glyn Wittwer and Janine Dixon about the upgrading of irrigation infrastructure in the Murray-Darling Basin. I do not know whether you are familiar with that report.

Mr Harriss: I have read a lot of the reports that have them produced by the Murray Darling Basin Authority or for the authority as part of the Basin Plan process—

Senator XENOPHON: No, this is produced by Monash University.

Mr Harriss: I stress that some of the issues they are talking about is upgrading infrastructure on farm. We are talking about broader infrastructure main supply such as Menindee Lakes, such as the broader area like Menindee-Caira, such as Perricoota-Koondrook.

Senator XENOPHON: I am concerned about time and do not want to get into a debate with you. I commend to you to consider that and ask you to take on notice whether you would agree or disagree with the underlying premise out of that paper that has now been tabled, which is one of the documents that will be considered by this committee.

Inquiry into the management of the Murray-Darling Basin

Public Hearing Monday 10 September 2012

Questions Taken on Notice – NSW Office of Water

1. HANSARD, PG 36-37

CHAIR: Having been through the Murrumbidgee floodplain and back through the back of Yanga?

...

Mr Harriss: We have done some initial works to have a look at the existing infrastructure. There are a whole lot of irrigation channels. The way they do it is that they pond that water, they put it on this paddock this year and put it on that paddock the next year. You probably know pretty well how they do it.

CHAIR: I do.

Mr Harriss: The idea is to reconfigure it so you can get better environmental outcomes at that site but also to enable an additional 3,000 megalitres per day to pass through the channel system into the river downstream at the Balranald choke. That will enable the Commonwealth environmental water holder to say, 'Here's the supplementary water,'—which, as you quite correctly pointed out, is during periods of above-regulated flow, so it is higher flow and it is when the environment would probably get it naturally. The environmental water holder can ask, 'Do I divert it here for environmental purposes or do I allow it to travel downstream to maybe divert it at Chowler or Hatter Lakes or wherever further downstream?'

CHAIR: In diverting it from the Murrumbidgee floodplain, what did the environmental studies say about the impact?

Mr Harriss: We have identified that what is being used in Nimmie-Caira now is providing some environmental dividend, because they divert water through the regulator into a channel and then it passes down some parts of a floodway, which quite correctly provides some sort of environmental value. But, if you are an irrigator and you have a diversion point on the Murrumbidgee or the Laughlin River, if you divert it into a channel and it goes through to provide some environmental benefits, that is well and good, but you have the right to divert that, to pipeline it and to stop that happening.

CHAIR: I said this earlier—and you would be aware if you had been there, and these blokes have been to see you—how many acres are we talking about of formed-up bays?

Mr Harriss: I do not know off the top of my head. We can take that on notice.

ANSWER

92,681 acres out of the 208,597 is developed for “floodplain system farming” where diverted flows are ponded over large cropping bays.

2. HANSARD, PG 39-40

CHAIR: On behalf of Australia's taxpayers, let's get down to the sums. I was very much involved in what was going to be the alleged original buyback of the lower Lachlan, if you recall—Juanbung and Boyong and that—which was a con job where the Commonwealth, with Robert Hill as the minister, said no because the remedial cost of all of that was outrageous. What is the remedial cost approximation of this country?

Mr Harriss: I do not think we have really set aside a cost for physical remedial works, but we have set aside the costs of the reconfiguration works, which will facilitate the better distribution of water for environmental purposes.

...

Mr Harriss: We have put out a couple of public documents which said that we have put to the Commonwealth under the proposed plan, which includes significant infrastructure components, that the value of that works is at the market value of the water recovered for the Commonwealth times a correction factor. That recognises, and New South Wales completely supports, that the investment in infrastructure works generates a sound environmental-social outcome and you do not get that from recovering water

CHAIR: I'm the cocky, right? Good luck to them if they get away with it. I understand that you are prepared to pay two and a quarter times the market value of the water. We do not know what the market value of the water is, so that could be a figure that is completely distorted depending on what you value the water at.

Mr Harriss: But, as I said, the Commonwealth have a formula for valuing the water and for valuing the different products.

CHAIR: But you must know, because the sellers know what that value is. I think the taxpayers are entitled to know.

Mr Raft: The active trades of supplementary water are recorded on our website.

CHAIR: But what is it? You are the guys in charge, for God's sake.

Mr Harriss: I do not know what the last trades were and, quite frankly, Senator—

CHAIR: Can you take all that on notice?

Mr Harriss: We can take it on notice and provide that stuff, but we typically try to avoid—

CHAIR: Thank you.

ANSWER

Refer to table published 19 September 2012

Addition Information (regarding question 2)

Question 2.1 Can you please briefly outline why the “price paid per unit” column has either a zero figure or is left blank (especially in the case of supplementary water)?

ANSWER

These are generally trades between related parties that are not commercial in nature and no money changes hands. Eg one person owns two entities and wants to transfer water entitlement from one to the other without cost. Another example might be a transfer within family members

Question 2.2 Can you please clarify whether the transfers are permanent trades of entitlement, or temporary trades of allocation?

ANSWER

The information on the trade registers previously forwarded was for permanent transfers.

3. HANSARD, PG 41

Senator XENOPHON: Okay, although I note that the Wentworth Group of Concerned Scientists did table a report from the Centre of Policy Studies at Monash University by Glyn Wittwer and Janine Dixon about the upgrading of irrigation infrastructure in the Murray-Darling Basin. I do not know whether you are familiar with that report.

Mr Harriss: I have read a lot of the reports that have them produced by the Murray Darling Basin Authority or for the authority as part of the Basin Plan process—

Senator XENOPHON: No, this is produced by Monash University.

Mr Harriss: I stress that some of the issues they are talking about is upgrading infrastructure on farm. We are talking about broader infrastructure main supply such as Menindee Lakes, such as the broader area like Menindee-Caira, such as Perricoota-Koondrook.

Senator XENOPHON: I am concerned about time and do not want to get into a debate with you. I commend to you to consider that and ask you to take on notice whether you would agree or disagree with the underlying premise out of that paper that has now been tabled, which is one of the documents that will be considered by this committee.

ANSWER

The NSW government wants to support its rural communities and to maintain a productive base. The report supports water buyback as being less costly, but water buybacks are generally poorly targeted and can reach a threshold where whole communities are jeopardised.

By contrast, infrastructure projects provide economic stimulus, particularly during the construction phase, and provide social benefits such as Indigenous employment and training opportunities.

The report recommends extra spending on services to provide economic activity, but this would be in areas with declining communities.

Due to its nature a project like Nimmie-Caira avoids the pitfalls of buyback as the broader regional community supports it, reconfiguration of water supply infrastructure will maximise environmental outcomes and the proposal provides for alternative land management options.

Transfer and Share Assignment Statistics

The *Water Management Act 2000* requires information on water trading to be made publicly available for the purpose of promoting informed and efficient water markets and improving administrative transparency. The information provided is limited to meet the requirements of section 57 of the *Privacy and Personal Information Act 1998*.

Using the search function provided below, you can access up-to-date information on the trading of water access licence share components (part or all of the share of the available water under the licence) to another licence holder in the same water source under section 71Q - Assign Share Component.

This Register does not include transfers of water access licences (ie. change of holder) pursuant to section 71M.

Note: The accuracy of pricing data is not guaranteed by the NSW Office of Water.
