 Canberra ACT 2600

IMPACT ON AGRICULTURE OF PEST ANIMALS

The federal member for Hume NSW, Alby Shultz wants to know why hundreds of wild dogs were not killed by the state Parks & Wildlife Services of NSW when the packs were seen roaming freely in the Kosiosko National Park following the 2003 bushfire. May be it is because the animal liberationist movement has penetrated the Parks & Wildlife Service same as they have penetrated the Greens and the R.S.P.C.A.

It is time for the state and federal government to stop locking up land which they cannot control the feral animals on. Next is for the state and federal government to get rid of it's anti-gun phobia and allow the hunters into these areas where they are locked out of at present and work with the farmers and graziers to eradicate the feral pests.

Also please stop the use of 1080 poison, This stuff is a real weapon of mass destruction in that you poison a rabbit. It does not stop there. Whatever eats the rabbit whether it is an ant or a hawk it will be poisoned by the 1080 poison which is still active in the body of the rabbit. This is animal genocide.
