

SECRETARY,
AGRICULTURE & FORESTRY COMMITTEE,
CANBERRA.

DEAR SIR,

AS ONE WHO HAS HAD WIDE EXPERIENCE
WITH DINGO & WILD DOG & FOX CONTROL IN WESTERN
QUEENSLAND, I OFFER THIS INFORMATION:-

- 1/ TRAPPING & SHOOTING ACHIEVES VERY LIMITED CONTROL.
- 2/ POISONING IS THE ONLY EFFECTIVE CONTROL METHOD ON BIG AREAS.
- 3/ THE ONLY BAIT ATTRACTIVE TO DOGS IS HORSE MEAT — WHY, I DO NOT KNOW. THEY WILL TAKE RABBIT & BEEF & MUTTON BAITS IF THEY FALL OVER THEM. THEY WILL SMELL & LOOK FOR HORSE MEAT OVER SUBSTANTIAL DISTANCES, SO THAT FAR FEWER BAITS WILL GET MUCH BETTER RESULTS.
- 4/ SODIUM FLUORO-ACETATE (1080) ^{30 APR 2004} IS BY FAR THE MOST EFFECTIVE POISON.

YOURS FAITHFULLY,

COLIN CLEFT
