

Submission No. 03

(Quarantine Facility)

Date: 13/03/13

Submission on

**A Joint Submission for a Post Entry Quarantine Facility  
report of Dept of Finance and deregulation**

Operating a Quarantine facility is in many ways like operating a submarine; both are designed to operate tightly sealed.

The first rule of submarine operations is never to have both ends of the torpedo tube open at the same time; if they are, disaster invariably follows.

This quarantine proposal , as it applies to the set up and operation of the avian facility, appears to propose a model of operation in which both ends of the quarantine torpedo tube can be opened at the same time.
