

**Senate Standing Committee on Environment and Communications**  
**Legislation Committee**  
Answers to questions on notice  
**Environment and Energy portfolio**

**Question No:** Supplementary to 85  
**Hearing:** Budget Estimates  
**Outcome:** Outcome 1  
**Program:** Biodiversity Conservation Division (BCD)  
**Topic:** Regional Forestry Agreements  
**Hansard Page:**  
**Question Date:** 11 July 2017  
**Question Type:** Written

**Senator Rice asked:**

Further to your response to Question on Notice 85 from the May 2017 Budget Estimates hearings, could the Department please provide the committee with a copy of the list of threatened species for which a significant portion (over 50%) exist in RFA areas, including which RFA area(s) they are in, their species conservation status AND their relevant conservation status under the old Endangered Species Protection Act (where it exists) as of 20 years ago?

**Answer:**

There are 534 threatened species currently listed under the EPBC Act for which a significant proportion (at least 50 per cent) of their mapped known and likely distribution occurs within Regional Forest Agreement areas. The attached list of these species identifies the RFA regions in which they occur, their current status and their status at the commencement of the EPBC Act which corresponds with their listing status at the conclusion of the Endangered Species Protection Act.

There are caveats on the interpretation and use of this list:

- The listing of a species may be due to threats independent of those operating within forested areas.
- An RFA area can cover a multitude of habitat types and land tenures apart from production forests
  - For example; the whole of Tasmania is an RFA area and as such, the threatened species list identifies many species found in grasslands, open woodlands or estuaries as well as those in protected areas, urban areas, agricultural areas and production forests. Consequently, all terrestrial listed species endemic to Tasmania are by definition included on the attached list.

EPBC Act threatened species with at least 50% of known/likely national distribution within RFA areas @10 August 2017
