Note 1 This paragraph alludes formation of the organisation in 1967 Note 2 This paragraph alludes formation of the organisation in 1969

## Questions:

How many offences stemmed from similar acts and facts by the same person at the same time?

How many offences occurred in the last 30 years, 20 years, 10 years and 5 years? Would the curve show decreasing or increasing values?

In the five categories listed, what were the total number of offences for the periods listed at column (b) in South Australia?

This will allow us to draw two facts - the % of the total offences committed in SA and the relationship between the State average and the Finks offences

In the five categories listed what were the number of offences committed by Police and Public Servants? If we assume this number is a benchmark, variance lower will show the flawed logic being used
